TITLE	Inventory of Major Information Systems and Services in Science and Technology.
INSTITUTION	Organisation for Economic Cooperation and Development, Paris (France).
PUB DATE	71
NOTE	322p.
EDRS PRICE	EDRS Price MF-\$0.65 HC-\$13.16
DESCRIPTORS	Automation, Directories, *Foreign Countries, Information Centers, Information Dissemination, Information Science, *Information Services, *Information Systems, Libraries, *Social Sciences
IDENTIFIERS	*Scientific and Technical Information

ABSTRACT

The purpose of this inventory is to list a number of "major" information services and systems in the field of science and technology, either in the government or in the private sector. If a distinction is made between traditional information systems such as libraries, documentation services etc., and the wide spectrum of mechanized systems, the inventory aims at retaining all mechanized systems and only important traditional ones. In particular, it includes all systems which are designed as mechanized systems from either a search or storage viewpoint and to which general national access is possible. Some systems are also included which consist of mechanized entry into systems which are based in other countries. Systems to which funds have been committed are also included even if not yet fully developed. The scope of the inventory includes social sciences and related fields. The indexes included at the beginning of the inventory enable the user to find an entry by its name, acronym, sponsoring body, country, area or field, etc. The present version of this inventory has been prepared on the basis of a joint survey carried out by the United Nations Economic Commission for Europe (ECE) and the Organization for Economic Co-operation and Development (OECD). Fiches sur les systèmes et services	45/340

INTRODUCTORY NOTE

The purpose of this inventory is to list a number of "major" information services and systems in the field of science and technology, either in the government or in the private sector. If a distinction is made between traditional information systems such as libraries, documentation services etc., and the wide spectrum of mechanised systems, the inventory aims at retaining all mechanised systems and only important traditional ones. In particular, it includes all systems which are designed as mechanised systems from either a search or storage viewpoint and to which general national access is possible. Some systems are also included which consist of mechanised entry into systems which are based in other countries. Systems to which funds have been committed are also included even if not yet fully developed.

The scope of the inventory, i.e. science and technology, should be given the widest interpretation, i.e. including social sciences and related fields.

The different indexes included at the beginning of the inventory will enable the user to find an entry by its name, acronym, sponsoring body, country, area or field, etc.

The present version of this inventory has been prepared on the basis of a joint survey carried out by the United Nations Economic Commission for Europe (ECE) and the Organisation for Economic Co-operation and Development (OECD). The OECD has dealt with English language services and systems and the ECE with other than English language ones. An indication as to which of these organisations has compiled an entry is made in each of these (bottom right of reverse sheet).

INTRODUCTION

Le but de ce répertoire est de rassembler des données sur les principaux services et systèmes d'information dans le domaine de la science et de la technologie, qui existent dans les secteurs gouvernemental et privé. Si l'on fait une distinction entre les systèmes d'information traditionaux, tels que bibliothèques, services de documentation, etc., et le large éventail des systèmes d'information mécanisés, le répertoire comprend les systèmes mécanisés et seulement les plus importants systèmes traditionnels. En particulier, il inclut tous les systèmes qu'on peut décrire comme étant mécanisés du point de vue du rappel ou de la mise en mémoire des informations, et dont l'accès est ouvert au public et à l'échelle nationale. Il comprend également quelques systèmes mécanisés qui sont reliés à des systèmes basés dans d'autres pays. On a également inclus des systèmes encore en projet, dès lors que des fonds ont été alloués pour leur développement.

Le portée du répertoire, c'est-à-dire "Science et Technologie", doit être extrêmement étendue, et y inclure, par exemple, les sciences sociales et leurs domaines connexes.

Les différents index qui se trouvent au début de l'ouvrage permettront à l'utilisateur de localiser un système déterminé par son nom, son sigle, son organe responsable ou de tutelle, son pays, son domaine d'application, etc.

Cette version du répertoire a été fondée sur une étude menée conjointement par la Commission Economique des Nations Unies pour l'Europe (C.E.E.) et l'Organisation de Coopération et de Développement Economiques (O.C.D.E.). L'OCDE a étudié les services et systèmes de langue anglaise, la CEE ceux utilisant des langues autres que l'anglais. Pour chaque fiche, l'organisation responsable est indiquée (en bas du revers, à droite).

GLOSSARY OF ITEMS ON FACT SHEETS
GLOSSAIRE DES RUBRIQUES DES FICHES

Name of system	Nom du système
Official abbreviation	Sigle officiel
Address	Lieu et adresse
Téléphone	N° de téléphone
Telex	N° de télex
Cable address	Adresse télégraphique
Sponsor or controlling body	Organisme responsable ou de tutelle
Approximate total staff	Effectif total approximatif du personnel
Approximate annual budget	Budget annuel approximatif
Date of first operation	Date d'entrée en exploitation
Area and purpose of system	Domaine et but du système
Area covered	Domaine couvert
Purpose of the system	But du système
Kind of co-operation with other information systems	Types de coopération avec d'autres systèmes d'information
Information inputs	Origines de l'information
Sources	Sources
Coverage	Fonds bibliographiques
Language	Langue
Books, including bibliographies	Livres, y compris bibliographies
Journals, including abstract journals	Périodiques, y compris revues de résumés analytiques
Technical reports	Rapports techniques
General printed matter	Imprimés divers
Manuscripts	Manuscripts
Verbal data or other media e.g. films, maps, drawings, etc.	Données verbales ou autres matériaux (fiches, cartes, dessins, etc)
Digested information from other systems	Information exploitée venant d'autres systèmes
Record content	Teneur des enregistrements
Author(s)	Auteur(s)
Title i.e. original title	Titre (titre original)
Abstract originated at source	Résumé fait à la source

Abstract originated by system U.D.C. or similar "universal" code	Résumé analytique issu du système C.D.V. ou code "universel" analogue
Classification code common to area covered	Code de classification commun au domaine couvert
Classification code peculiar to system	Code de classification propre au système
Keywords, descriptors, terms	Mots-clés, descripteurs, termes
This item is present in the record	Cet élément est enregistré
This item is mandatory for output	Cet élément est obligatoirement reproduit dans la sortie
This item is optional for output	Cet élément est facultativement reproduit dans la sortie
This item is used for search	Cet élément sert à la phase d'exploration
This item is available for search	Cet élément peut être objet d'exploration
Classification basis used	Base de la classification employée
Mechanisation basis	Base de mécanisation
Media used for total record	Moyens qui sont employés comme support de l'enregistrement complet
Media used for the search record	Moyens utilisés pour l'enregistrement de la recherche
Computer based	Ordinateur
Configuration	Configuration
Minimum configuration required to search the files for retrieval purposes or to replicate the system performance elsewhere	Configuration minimale requise pour explorer les fichiers aux fins de rappel de l'information ou pour reproduire ailleurs les résultats obtenus
Reprographic methods used to distribute the output of the system	Méthodes de reproduction employées pour communiquer les sorties du système
Output to user	Formes sous lesquelles le produit final est disponible pour l'utilisateur
Output options available	Différentes options possibles
Machine-readable format in which output is available	Présentation lisible à la machine et dans laquelle le produit final est disponible
Usage information	Renseignements concernant l'utilisation
Availability of the system	Disponibilité du système

Charge basis to users	Tarif appliqué aux utilisateurs
Estimate of input of citations	Estimation des entrées
Estimate of output of citations	Estimation des sorties
Planned developments	Développements prévus
References	Références.

I.

AEROSPACE

DOMAINE AEROSPATIAL

Name of system: SPACE DOCUMENTATION SERVICE

Official Abbreviation: ESRO/ELDO SDS

Address: 114 Avenue de Neuilly,
92 Neuilly-sur-Seine
France.
Telephone: 637 74 00
Telex: 62389
Cable Address: ESRO NEUILLY

Sponsor or controlling body: European Space Research Organisation (ESRO)
European Space Vehicle Launcher Development Organisation (ELDO)

Approximate total staff: 25
Approximate annual budget: \$1,000,000 (5,500,000 fr)
Date of first operation: 1965

A.

Area covered:

Purpose of system:

Kind of co-operation with other information systems: Basis of system is generous exchange agreement, by which the National Aeronautics and Space Administration makes available to SDS information published in Scientific & Technical Aerospace Report.

AREA AND PURPOSE OF SYSTEM

Aeronautical engineering, aircraft, bioscience and technology, chemistry, communications, computers, electrical eng, electronics, fluid mechanics, geophysics, instruments & photography, mech. engineering, metallurgy, plastic/composites, maths, meteorology, navigation, nuclear physics/eng. physics, plasma physics, propellants, propulsion systems, astronomy, space sci./tech. space vehicles, thermodynamics, structural eng. Prompt, comprehensive and effective dissemination in Europe of scientific and technical information relating to the aerospace field.

B.

INFORMATION INPUTS

(i)

NASA Thesaurus (NASA SP 7030)

Classification basis used:

D.

MECHANISATION BASIS

Media used for total record: Visible records, other computer storage, interchangeable e.g. discs.
computer magnetic tape
" " " " " " " " " "

Media used for the search record:

Computer based

Configuration: Model number: IBM 360/65; size of core: 768K; number of tape units: 16; disc units: 2 (2314); input and output devices: 3 printers, card reader/punch, paper tape reader/punch, magnetic tape reader, 1 data cell, 4 remote consoles, 1 magnetic drum

Minimum configuration required to search the files for retrieval purposes or to replicate the system performance elsewhere: 1 data cell, 2 disc drives, 1 printer, 1 remote console, 2 magnetic tapes. 100K

Reprographic methods used to distribute the output of the system: Citations available in microfiche or hardcopy form. Printouts printed by high speed printer and duplicated by XEROX 3600 in the case of SP's. There is no need to reproduce RB's and SDI's.

E.

OUTPUT TO USER

Output options available:

1. Accession number format (corresponds to accession numbers in STAR/IA)
2. Full bibliographical citation plus descriptors used for indexing/retrieval purposes.
3. Retrospective bibliographies: about 10 documents per day - bits between 0 and 1,000 citations.
4. Standard profiles. 111 titles non monthly - about 20 bits each per month.

Machine-readable format in which output is available: No

F.

USAGE INFORMATION

Availability of the system: Request made by letter, telephone, telex, or call.

Charge basis to users: Government sponsored institutes: RB - free; SDI - 168 F each; SP - 84 F each; Industry: RB - 420 F each; SDI - 460 F each, SP - 84 F

Estimate of input of citations: 300 per day

Estimate of output of citations: 1,000 per day

G.

RECENT OR PLANNED DEVELOPMENTS

Data bank of reliability and quality data on electronic components and materials. Remote consoles to be installed in Member states.

Compiled by OECD

Name of system:

NATIONAL AERONAUTIC AND SPACE ADMINISTRATION

I-2	USA
AEROSPACE	

Official Abbreviation: NASA (Scientific and Technical Information Facility)

Address: P.O. Box 33, College Park, Maryland 20740

Telephone: 301 779-2121

Telex:

Cable Address:

Sponsor or controlling body: National Aeronautics and Space Administration

Approximate total staff: 300

Approximate annual budget: \$5,000,000 (1970)

Date of first operation: 1962

AREA AND PURPOSE OF SYSTEM

A.

Area covered: World's Aerospace Report Literature

Purpose of the System: To make the results of worldwide research and development activities in aeronautics, space, and supporting disciplines promptly available to participants in the programmes of the National Aeronautics and Space Administration and to provide for the widest practicable and appropriate dissemination of such information.

Kind of co-operation with other information systems: Computer tapes made available to the Clearinghouse for Federal Scientific and Technical Information (CFSTI) and to European Space Research Organisation (ESRO)

INFORMATION INPUTS

B.

(i)	Sources	Coverage	Language
	NASA, NASA contractors, other U.S. Government agencies, and corporations, universities, and research organisations throughout the world	Report literature on the science and technology of space and aeronautics	All

(ii) Digested information from other systems: Defense Documentation Center (DDC) computer tapes; Dissertation Abstracts (University Microfilms, Inc.)

MECHANISATION BASIS

Media used for total record: Magnetic tape

Media used for the search record: Magnetic tape; disc cell; disc pack

Computer based:

Configuration: IBM 360/50, 512 K core, 4 tapes, two 2314's, one 2321

Minimum configuration required to search the files for retrieval purposes or to replicate the system performance elsewhere: as above

Reprographic methods used to distribute the output of the system: Microfiche

E.

OUTPUT TO USER

Output options available: Tape; Scientific and Technical Aerospace Reports (STAR);
Classified Scientific and Technical Aerospace Reports (CSTAR);
Selected Current Aerospace Notices (SCAN);
RECON (real-time, on-line, time-shared information retrieval by
remote console;
microfiche of scientific and technical reports

Machine-readable format in which output is available: Tape 7 or 9 (856 bpi) tracks

F.

USAGE INFORMATION

Availability of the system: Some information services available to registered users from the NASA
Scientific and Technical Information Facility; STAR available from
U.S. Government Printing Office

Charge basis to users: STAR (semi-monthly) \$2.25/issue (domestic)
\$54/year (domestic), \$68.25/year (foreign)
Cumulative Index (semi-annual) \$30/year (domestic) - \$35/year (foreign)

Estimate of input of citations: 65,000 (1970)

Estimate of output of citations: 8,000,000 microfiche (1970)

G.

RECENT OR PLANNED DEVELOPMENTS

None

Cable Address:

Sponsor or controlling body: American Institute of Aeronautics & Astronautics

Approximate total staff: 105

Approximate annual budget:

Date of first operation: 1936

AREA AND PURPOSE OF SYSTEM

A.

Area covered: Aerospace - Space sciences

Purpose of the System: Publication of semi-monthly International Aerospace Abstracts and Cumulated Indexes.
Provision of copies of cited material - Reference service.

Kind of co-operation with other information systems: Citations in International Aerospace Abstracts
included in NASA magnetic tape system

INFORMATION INPUTS

B.

(i)	Sources	Coverage	Language
	Books including bibliographies	Selected material	Several languages
	Journals including abstract journals	Extensive	" "

- * B: M = the item is mandatory for output
O = the item is optional for output
- * C: S = the item is used for search
A = the item is available for search

Classification basis used: NASA Thesaurus provides a structured indexing vocabulary based on over 200 groups of related subject hierarchies derived from the 34 subject categories in IAA.

D.

MECHANISATION BASIS

Media used for total record: Computer magnetic tape, Other computer storage, interchangeable, e.g. discs
Media used for the search record: Computer magnetic tape, Other computer storage, interchangeable, e.g. discs
Computer based: Octal based random access Master File
Configuration: Remote access computer - IBM 360 MOD 50 - 9 Disks - 4 Tapes

Minimum configuration required to search the files for retrieval purposes or to replicate the system performance elsewhere: System supports field use in configurations from IBM 1401 (4 tape drives) and UP-IBM 1410, IBM 360, MOD 40, 65, etc.

Reprographic methods used to distribute the output of the system: 1. Chain printed listings
2. Computer Text composition, driven by Tape output of the NASA system.

E.

OUTPUT TO USER

Output options available: - weekly abstracts (IAA & STAR)
- bi-monthly dissemination by user profiles

Machine-readable format in which output is available: None

F.

USAGE INFORMATION

Availability of the system: Phone, letter, TWX, etc.

Charge basis to users: None

Estimate of input of citations: 150 per day

Estimate of output of citations:

G.

AGRICULTURE

Name of system: FAO DOCUMENTATION SYSTEM

Official Abbreviation: No official one - could be FAODOC

Address: Via le delle Terme de Caracalla, Rome

Telephone: 5797

Telex: 61181 FOODAGRI

Cable Address: FOODAGRI Rome

Sponsor or controlling body: Food and Agricultural Organization of the United Nations

Approximate total staff: Seventeen (17)

Approximate annual budget: \$ 160000

Date of first operation: 1st January 1967

AREA AND PURPOSE OF SYSTEM

A.

Area covered: Agriculture, Forestry and Fisheries

Purpose of the System: 1) - Complete documentary services on FAO publications and documents
- Current Awareness Service, Retrospective Service, Question and Answer Service
2) - To serve as research and pilot documentation Centre for technical assistance projects in developing countries in the field of agricultural Documentation.

Kind of co-operation with other information systems:
Participation in documentation activities at international, regional and national level

INFORMATION INPUTS

B.

(i) Sources	Coverage	Language
Books including bibliographies	Extensive	Official languages of FAO
Technical Reports	Extensive	Official languages of FAO
General printed matter	Selected material	Official languages of FAO
Manuscripts	Selected material	Official languages of FAO
Films		

(ii) Digested information from other systems:

RECORD CONTENT

C.

	A*	B*	C*
Authors	X	M	A
Source	X	M	A
Title i.e. original title	X	M	A
Abstract originated at source			
Abstract originated by system	X	M	A
U.D.C. or similar "universal" code			
Classification code common to area covered			
Classification code peculiar to system			
Keywords, descriptors, terms	X	M	S
Full text			

- * A: X = the item is present in the record
- * B: M = the item is mandatory for output
O = the item is optional for output
- * C: S = the item is used for search
A = the item is available for search

Classification basis used

No classification scheme is used. The system is based on the principles of coordinate indexing i.e. by making use of a thesaurus composed of a series of standard technical terms of descriptors (3.000) completed by a series of more specific identifying terms or specifiers (5.000). The procedure consists in assigning a set of these terms to each document linking them together to form descriptive phrases. The descriptors and specifiers contained in the latter are then permuted in a KWIC type of index produced by the computer.

D.

MECHANISATION BASIS

Media used for total record:

Media used for the search record:

Computer based

Configuration: Honeywell 1250, 128 k, 6 T., 5 Discs, 2 printers.

Minimum configuration required to search the files for retrieval purposes or to replicate the system performance elsewhere:

Retrieval being programmed. Probably 2 discs + 2 tapes.
Equivalent of 1 IBM 3.60/40, 64 K, 4 tapes, 2 Discs.

Reprographic methods used to distribute the output of the system:

1. Computer Printouts reduced photographically for Index printing.
2. Output on Cards, for the Centre basic records.
3. Temporarily : Photocopy of Cards for special bibliographies on request. Later : retrieval through computer.

E.

OUTPUT TO USER

Output options available:

Machine-readable format in which output is available:

F.

USAGE INFORMATION

Availability of the system: System is available to all categories of users (institutions, libraries and documentation services, individuals) Individual request either by simple letter or through request forms inserted in each issue of the indexes.

Charge basis to users:

- Monthly Current Index : free of charge
- Other indexes : handling charge of \$1 per 100 pages

Estimate of input of citations:

15 per day

Estimate of output of citations:

80 per day

Classification basis used: Classification scheme of its own, non compatible with the old PIC records

D.

MECHANISATION BASIS

Media used for total record:

Media used for the search record:

Computer based:

Configuration: The tape is standard half-inch size, 9 track, 800 bpi, in EBCDIC, with standard IBM 80 character leaders and trailers. The length varies from 173 to 3878 characters, blocked 2.

Minimum configuration required to search the files for retrieval purposes or to replicate the system performance elsewhere:

do.

Reprographic methods used to distribute the output of the system:

The tape is in upper case containing characters on the IBM QN train, with special indicators as part of the data so that it can be printed in upper and lower case using an IBM TN train or equivalent

E.

OUTPUT TO USER

Output options available: Magnetic tape

Machine-readable format in which output is available:

do

F.

USAGE INFORMATION

Availability of the system: On charge to outside users.

Charge basis to users: Merely reproduction costs: \$60. for the first reel plus \$47.50 for each additional reel created at the same time. Complete file (\$155) and monthly up-date file (\$60) are also available

Estimate of input of citations:

Estimate of output of citations:

* A: X = the item is present in the record
 * B: M = the item is mandatory for output
 O = the item is optional for output
 * C: S = the item is used for search
 A = the item is available for search

Classification basis used: Classification based on UDC (F.AE.Koekebakker, Landbouwcode - Dutch Agricultural Code)

D.

MECHANISATION BASIS

Media used for total record: Visible records, source file. This guide to agricultural bibliographic literature is a loose collection of bibliographical data, classified according to Dutch Agricultural Code, arranged in hanging files.

Media used for the search record: Visible records, Source file

Computer based: Only the index to our weekly "Landbouwdocumentatie" (Agricultural Documentation) is made by Computer. This index is not important for our searches on request.

Configuration:

Minimum configuration required to search the files for retrieval purposes or to replicate the system performance elsewhere:

Reprographic methods used to distribute the output of the system:

E.

OUTPUT TO USER

Output options available: Periodic abstracts and indexes, Quick reference service, Bibliographical lists on

- Quick references on request (approx. 500 per year)
- Bibliographical lists on request (approx. 150 per year)
- Literature reports or reviews (approx. 12 per year)
- Periodic abstracts or indexes:
 - Landbouwdocumentatie (weekly in dutch): 7500 abstracts per year
 - Agricultural Aspects of the Common Market (monthly in English): 2000 titles per year
 - Pudoc Bulletin (quarterly in English): lists about 2500 publications per year on Dutch agricultural and biological science
 - Documentation East European Agricultural Literature (DEAL) (every other month in English and German): lists 8000 selected titles translated from East European languages, per year. Review articles.

F.

Availability of the system: Information service open to everybody. Individual requests in any form: letter telephone, oral.

Charge basis to users: In general for Dutch scientists and advisory people information is free of charge. The charge for literature reports is based on the real costs of the information officers. The charge basis for the current awareness system is Dfl. 150 for one profile + Dfl. 1.10 for each title

Estimate of input of citations:

Estimate of output of citations:

Name of system: MEDICAL LITERATURE ANALYSIS AND RETRIEVAL SYSTEM

Official Abbreviation: MEDLARS

Address: 8650 Rockville Pike,
Bethesda,
Maryland 20014 (U.S.A.)

Telephone:

Telex:

Cable Address:

Sponsor or controlling body: NATIONAL LIBRARY OF MEDICINE

Approximate total staff: 175

Approximate annual budget:

Date of first operation: operational from January 1964

AREA AND PURPOSE OF SYSTEM

A.

Area covered: Biomedical Sciences

Purpose of the System: To achieve rapid bibliographic access to the Library's vast store of biomedical journal information - To provide references to the biomedical literature to researchers, clinicians and other health professionals.

Kind of co-operation with other information systems:

INFORMATION INPUTS

B.

(1)	<u>Sources</u>	<u>Coverage</u>	<u>Language</u>
	2300 Biomedical Journals (45% foreign)	Comprehensive	40 languages
	250 Primary Journals with median currency of 56 days		

~~XXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXX~~

- Time of search in U.S. (7 - 30 days)
- Three levels of searching: AND/OR/NOT logic
- Mesol headings printed with citation

- * A: X = the item is present in the record
- * B: M = the item is mandatory for output
O = the item is optional for output
- * C: S = the item is used for search
A = the item is available for search

Classification basis used:

The one used by National Library of Medicine.

D.

MECHANISATION BASIS

Media used for total record: One 12 inch tape = 30,000 Citations; file = 46 tapes
Usually batch 25-30 searches a time

Media used for the search record:

Computer based NCM: Honeywell H-800, H-200; Photon 90: 226 characters, speed 300 characters/sec.
7 magnetic tape drive
Configuration: Other computers: English Electric KDP9, IBM 360, 7094, 7090

Minimum configuration required to search the files for retrieval purposes or to replicate the system performance elsewhere:

Reprographic methods used to distribute the output of the system:

- Photon ZIP 902 (500-800 characters/second) \$ 285,000
- Linotron 1010 (CBS Mergenthaler) 1100 characters/sec, used by GPO
- RCA Videocomp (Spectra 70)
- IBM 2680 (Produced by Alphanumeric)
- ** - IBM 2280 Film Recorder: Chemical Abstracts Service, 2000/3000 characters/sec; 1500 character set needed

E.

OUTPUT TO USER

Output options available: - Index Medicus, monthly, 3 print index terms (average)
- Cumulated Index Medicus; 2 author, 5 subject volumes (1x1 Subscribers, 7000)
- Medical Subject Headings (Me SH)
- List of Journals Indexed in Index Medicus

Machine-readable format in which output is available: - Bibliography of Medical Reviews
- NLM Current Catalogue (monthly, quarterly or annual cumulations)
- Recurring Bibliographies (18 up to date)
- Prepared Bibliographies (some 120)
- Demand Bibliographies (12,000 per year in U.S. for individual requests)

F.

USAGE INFORMATION

Availability of the system: On request

Charge basis to users: For charges see Ref. 1 below, p. 16-17

Estimate of input of citations: } Store of 1,250,000 citations from mid. 1963 to September 1970

Estimate of output of citations: } U.S. Tape Searches = 8,500/year
U.K. Tape Searches = 1,900/year

G.

RECENT OR PLANNED DEVELOPMENTS

Medlars II: New hardware. Abstracts on file. On-line Access and time-sharing facilities contract with SCD (Santa Monica) for ORBIT (On-line retrieval of Bibliographical Text)

- ** - Photon 200 (User to print J. Chem. Doc., J. Chem. & E. of Data, I. & E.C., Product Research, etc.)
- Lumitype (Photon) 713 Phototype setter: Physics Abstracts 1700 character set needed, yields 25 characters/second.
- IBM 1403 Printer (modified) 120 character set, 40 lines/second used for CBH & POST
- Fototronic - CRT (Harris Intertype Corp.) (1000 char./sec., 4-24 points)

Name of system: MEDICAL LITERATURE ANALYSIS AND RETRIEVAL SYSTEM (GERMANY)

Official Abbreviation: MEDLARS

Address: DIMDI - Deutsches Institut für medizinische Dokumentation und Information
Weisshausstr. 27,
5 Cologne 41, Germany.

Telephone: (0211) 44 20 81

Telex: 888 1364

Cable Address:

Sponsor or controlling body: Ministry of Youth, Family and Health

Approximate total staff: 33

Approximate annual budget: DM.1.9 million

Date of first operation: March 1968

A. AREA AND PURPOSE OF SYSTEM

Area covered: Biomedicine

Purpose of the System: At DIMDI: To provide physicians and scientists with bibliographies for special demands

Kind of co-operation with other information systems:

In preparation: Use of the register numbers of Chemical Abstracts

B. INFORMATION INPUTS

(i)	<u>Sources</u>	<u>Coverage</u>	<u>Language</u>
	Journals (including abstract journals)	Exhaustive	Mainly English and German

(ii) Digested information from other systems:

C. RECORD CONTENT

	A*	B*	C*
Authors	X	M	A
Source	X	M	
Title i.e. original title	X	M	
Abstract originated at source			
Abstract originated by system

- * A: X = the item is present in the record
- * B: M = the item is mandatory for output
O = the item is optional for output
- * C: S = the item is used for search
A = the item is available for search

Classification basis used:

Specific polihierarchical classification

D.

MECHANISATION BASIS

Media used for total record: Magnetic tape, discs, etc.

Media used for the search record: 80-column punched cards, magnetic tape, discs, core, etc.

Computer based:

Configuration: Siemens 4004/55

Minimum configuration required to search the files for retrieval purposes or to replicate the system performance elsewhere:

Reprographic methods used to distribute the output of the system: The records are printed either on four inch pasteboard cards or on DIN A 4 paper by an MDS computer printer

E.

OUTPUT TO USER

Output options available: Retrospective bibliographies on special demand (a single bibliography includes on average several hundred citations)

Machine-readable format in which output is available: Possible, but not used:
- magnetic tapes for on-line printing
- magnetic tapes for off-line printing

F.

USAGE INFORMATION

Availability of the system: In the Federal Republic of Germany only through DIMDI

Charge basis to users: Until now free of charge

Estimate of input of citations: 220,000 per year (for the whole system)

Estimate of output of citations: 5,000 (at DIMDI)

G.

RECENT OR PLANNED DEVELOPMENTS

In accordance with the development of MEDLARS II, the introduction of an on-line retrieval is planned

Classification basis used: Therapeutic, Pharmacologic and Chemical, developed by de Haen.

D.

MECHANISATION BASIS

Media used for total record: Printed Index compiled by computer

Media used for the search record: Printed Index or Magnetic Tape

Computer based

Configuration: Honeywell H-1200 and Honeywell H-2200

Minimum configuration required to search the files for retrieval purposes or to replicate the system performance elsewhere:

Reprographic methods used to distribute the output of the system: Index cards and printed indices.

E.

OUTPUT TO USER

Output options available: Original excerpts; annotated citations; printed indices; magnetic tape; microfilm.

I. de Haen Drugs in Prospect	(Record and Source of NEW DRUG SYNTHESIS)
II. de Haen Drugs in Research	(Bibliographic and Annotated Record of Drugs under Investigation)
III. de Haen Drugs in Use/Drugs in Combination	(Record and Source of Clinical Drug Experience)
IV. de Haen Drugs in Medical Practice (U.S.A.)	(Bibliographic and Annotated Record of Drugs in use in the U.S.A.)

Machine-readable format in which output is available: Printed indices, magnetic tape.

F.

USAGE INFORMATION

Availability of the system: Index cards and printed computerized indices.

Charge basis to users: Annual subscription, for each service.

Estimate of input of citations: Over 10,000 annually.

Estimate of output of citations: Over 10,000 annually.

G.

RECENT OR PLANNED DEVELOPMENTS

Classification basis used: "Medical and Health Related Sciences Thesaurus", Public Health Service
 Publication No. 1031, March 1963 and revised editions. Available at Government Printing Office,
 Supt. of Documents, Washington, D.C. and compiled by the Research Documentation Section, Statistics
 and Analysis Branch, Division of Research Grants, National Institutes of Health, Bethesda, Maryland 20014

D.

MECHANISATION BASIS

Media used for total record: Computer magnetic tape, Other computer storage, interchangeable, e.g. discs, Other computer storage, system-bound, e.g. core

Media used for the search record: 80-column cards, Computer magnetic tape, Other computer storage, interchangeable, e.g. discs. Other computer storage, system-bound, e.g. core

Computer based

Configuration: IBM 360/65 - Configuration for Query programme: core, 110,500 bytes; card reader, printer, 1 tape unit, 3 (2314) disc units.

Minimum configuration required to search the files for retrieval purposes or to replicate the system performance elsewhere: Query programme requires an IBM 360/65; card reader, printer, 1 tape unit, 3 discs (2314)

Reprographic methods used to distribute the output of the system: Magnetic tape with indicators for processing by the U.S. Government Printing Office's Linotron equipment which produces paper positives from which negatives are made for offset printing of an annual publication, the RESEARCH GRANTS INDEX.

E.

OUTPUT TO USER

Output options available: Diagnostic error reports, Size depends on input size. Two fixed format reports from query, variable size, One variable format report from query, variable size.

Machine-readable format in which output is available: N.A.

F.

USAGE INFORMATION

Availability of the system: Annual RESEARCH GRANTS INDEX available by purchase from GPO, as noted above. Other services available only through Division of Research Grants, National Institutes of Health, Bethesda, Maryland, (attn: Research Documentation Section).

Charge basis to users:

Estimate of input of citations: About 17,000 projects (depth indexing of applications, progress reports) yearly.

Estimate of output of citations: As above

G.

RECENT OR PLANNED DEVELOPMENTS

Refinements of present system.

REFERENCES

Name of system: BRAIN INFORMATION SERVICE

Official Abbreviation: BIS

Address: School of Medicine, University of California, Los Angeles, California 90024, U.S.A.

Telephone: 213-825-6474

Telex: UCLA

Cable Address:

Sponsor or controlling body: National Institute of Neurological Diseases and Stroke
(a part of the National Institute of Health)

Approximate total staff: 30

Approximate annual budget: \$300,000.

Date of first operation: July 1964

AREA AND PURPOSE OF SYSTEM

A.

Area covered: The fields of neuroanatomy, neurophysiology, neurochemistry, neuroendocrinology, and neuropharmacology of the central nervous system (brain and spinal cord). (Clinical neurology and behavioral psychology are not included).

Purpose of the System: To provide to scientists and clinicians concerned with the basic neurological sciences bibliographic services in their fields and to promote the preparation of reviews and other syntheses of neurological information.

Kind of co-operation with other information systems: The Brain Information Service is part of the Neurological Information Network of the National Institute of Neurological Diseases and Stroke

INFORMATION INPUTS

B.

(i)	Sources	Coverage	Language
	Books including bibliographies	Extensive	Several languages
	Journals including abstract journals	"	"
	Technical reports	Selected material	"
	General printed matter	Partial	"
	Manuscripts	"	"

(ii) Digested information from other systems: Selected citations from National Library of Medicine MEDLARS citation files - approximately 2,500 citations per month.

Approximate total staff: CA 1,000 full-time staff and CA 3,000 volunteer abstractors

Approximate annual budget: \$16.4 million (1969)

Date of first operation: 1907

AREA AND PURPOSE OF SYSTEM

A.

Area covered: Chemistry and Chemical Engineering

Purpose of the System: Abstracts of documents relevant to chemistry and chemical engineering. Coverage includes over 12,000 journals, as well as the patents of 26 countries, new books, conference proceedings, and government research reports pertinent to the chemical sciences

Kind of co-operation with other information systems: Some input information received from Chemie Information und Dokumentation, Berlin, successor to Chemisches Zentralblatt

INFORMATION INPUTS

 A = the item is available for search

(1) Patent Concordance on magnetic tape, index of duplicate patents, that correspond to patents for which an abstract has been previously published in CA.

Classification basis used: Abstracts are classified by subject and are assigned to one of 80 categories or Sections. A listing of the Sections covered is given in each issue of CA. The arrangements of abstracts within any given Section of CA places journal-article abstracts first, new book announcements second, and patent abstracts third.

The abstract number, in boldface at the head of each abstract and book announcement runs continuously through an entire volume. The letter following each number is a computer-generated check-letter by which each reference can be computer-validated. Check letters have been used since Volume 66.

D.

MECHANISATION BASIS

Media used for total record: Visible records, Computer magnetic tape, Other computer storage, interchangeable, e.g. discs

Media used for the search record: Visible records, Computer magnetic tape (patent concordance only)
Indexes are computer produced. Presently selected sections are being produced via computer-driven photocomposition systems as part of a step-wise conversion to all computer composition.

Computer based:

Configuration: IBM Model 360/50 (256K) IBM 2280 Film Processor IBM 2420 V Tape Drives (12)
IBM Model 360/50 (384K) IBM 2314 Disk Facility (2)
IBM 1403 N1 Printers (3) IBM 2401 II Tape Drives (2)
IBM 2250 Cathode Ray Tube Display IBM 2401 V Tape Drives (4)

Minimum configuration required to search the files for retrieval purposes or to replicate the system performance elsewhere: Not applicable

Reprographic methods used to distribute the output of the system: Traditional hot-metal publication system for most abstract sections of issues. Selected sections are being produced by computer systems as a part of a step-wise conversion to complete computer composition.

Computer composition for all issue, volume and collective indexes.

OUTPUT TO USER

E.

Output options available: Printed form issued in 2 volumes of abstracts per year, 26 issues per volume. Volume indexes are issued twice a year. Collective indexes issued every 5 years. Microfilm form of abstracts only issued in 8-10 130 ft. 16 mm reels per year. Computer-readable form of patent concordance issued 26 times annually on one 2400 ft. reel of magnetic tape per issue.

Machine-readable format in which output is available:

USAGE INFORMATION

F.

Availability of the system: Residents of the U.K. and Ireland should contact The Chemical Society, Publications Sales Office, Blackhorse Road, Letchworth, Hertfordshire, England (Telephone: Letchworth 5817) for all subscription information and business transactions.

Residents of the Federal Republic of Germany should contact Verlag Chemie, 6940 Weinheim Postfach 129/149, Fed. Rep. of Germany (Tel: Sammelnummer 06201 3635; Teletype: Chemie Verlag Weinheimbergstr. 465516) for all subscription information and business transactions.

Residents of the U.S. and all other countries, with the exception of the U.K. and Ireland and the Federal Republic of Germany, should contact the (Chemical Abstracts Service, Marketing Department, The Ohio State University, Columbus, Ohio 43210 (Telephone: 614 422-5022; teletype: 810 482-1608), for all subscription information, remittances, changes of address and claims for missing issues

Estimate of input of citations: Approximately 1,000 abstracts are processed per workday

Estimate of output of citations:

RECENT OR PLANNED DEVELOPMENTS

* B: M = the item is mandatory for output
O = the item is optional for output
* C: S = the item is used for search
A = the item is available for search

Classification basis used:

- Entries are catalogued according to the American Library Association Cataloging rules.

- Titles are abbreviated according to the American National Standards Institute practices.

ASTM Coden are used to specify journal of origin plus a computer-calculated sixth character to assure Coden reliability in computer-based systems. In the Keyword-In-Context Index these are combined with a group of digits representing the volume and a second group of digits representing the page number of the publication cited.

Library identification is made by National Union Catalog (NUC) symbols.

Directories of participating libraries are alphabetically arranged by NUC symbol and parent organization.

D.

MECHANISATION BASIS

Media used for total record: Visible records, Computer magnetic tape, Other computer storage, interchangeable, e.g. discs.

Media used for the search record: Visible records.

Computer based CASSI is computer-produced via computer-driven photocomposition systems; presently the IBM 2280 system is used.

Configuration:

IBM Model 360/50 (256K)	IBM 2250 Cathode Ray Tube Display	IBM 2401 II Tape Drives (2)
IBM Model 360/50 (384K)	IBM 2280 Film Processor	IBM 2401 V Tape Drives (4)
IBM 1403 N1 Printers (3)	IBM 2314 Disk Facility (2)	IBM 2420 V Tape Drives (12)

Minimum configuration required to search the files for retrieval purposes or to replicate the system performance elsewhere:

Not applicable

Reprographic methods used to distribute the output of the system:

Offset plates prepared from computer-driven chain printer output.

E.

OUTPUT TO USER

Output options available: Published in 1969; quarterly printed supplements issued in December, March and June each year. A cumulative quarterly incorporating the first three and new material issued each September.

Machine-readable format in which output is available:

Not available.

F.

USAGE INFORMATION

Availability of the system: Residents of the United Kingdom and Ireland should contact The Chemical Society, Publications Sales Office, Blackhorse Road, Letchworth, Hertfordshire, England (Telephone: Letchworth 5817) for all subscription information and business transactions.

Residents of the Federal Republic of Germany should contact Verlag Chemie, 6940 Weinheim Postfach 129/149, Federal Republic of Germany (Telephone: Sammelnummer 06201 3635; Teletype: Chemie-Verlag Weinheimbergstr. 465516) for all subscription information and business transactions.

Residents of the United States and all other countries, with the exception of the United Kingdom and Ireland and the Federal Republic of Germany, should contact the Chemical Abstracts Service Marketing Department, the Ohio State University, Columbus, Ohio 43210 (Telephone: 614-422-5022, Teletype: 810-482-1608) for all subscription information, remittances, changes of address and claims for missing issues.

Charge basis to users:

Estimate of input of citations: Approximately 25 bibliographic citations are processed per workday

Estimate of output of citations:

G.

Approximate annual budget: 1,2 Million US \$

Date of first operation: 1830 publication CHEMISCHES ZENTRALBLATT
1970 publication CHEMISCHER INFORMATIONSDIENST

A. AREA AND PURPOSE OF SYSTEM

Area covered: Inorganic, physical, low molecular Organic Chemistry

Purpose of the System: ChemInform serves scientists and industrial chemists to keep them abreast and to facilitate their efforts of being informed.
The cooperation with CAS reflects the trend to develop an international information network.

Kind of co-operation with other information systems: 1) International Documentation of Chemistry (IDC), Frankfurt/M.
2) Chemical Abstract Service (CAS)

B. INFORMATION INPUTS

(i)	<u>Sources</u>	<u>Coverage</u>	<u>Language</u>
	Journals	Selected	Several languages

(ii) Digested information from other systems:

C. RECORD CONTENT

	A*	B*	C*
Authors	X	O	S
Source	X	O	S
Title i.e. original title	X	O	A
Abstract originated at source			
Abstract originated by system			
U.D.C. or similar "universal" code			
Classification code common to area covered			
Classification code peculiar to system	X	O	S
Keywords, descriptors, terms	X	O	S
Full text			

* A: X = the item is present in the record
* B: M = the item is mandatory for output
O = the item is optional for output
* C: S = the item is used for search
A = the item is available for search

Classification basis used: Own system

D.

MECHANISATION BASIS

Media used for total record: Visible records, Computer magnetic tape, Other computer storage, interchangeable, e.g. Discs
Media used for the search record: as above

Computer based

Configuration: IBM 360-20, 24 K, 4 tapeunits 2415, 1 disc unit 2311, paper-tapereader Facit PE 1001, MFCM 2560, printer 1403

Minimum configuration required to search the files for retrieval purposes or to replicate the system performance elsewhere: as above

Reprographic methods used to distribute the output of the system: Offset printing for the issue indexes, Composer typesetting and offset printing for the abstracts part.

E.

OUTPUT TO USER

Output options available: printed weekly issue of "CHEMISCHER INFORMATIONSDIENST"
part A (inorganic and physical chemistry), 15 000 abstract/year
part B (low molecular organic chemistry), 20 000 " "

Machine-readable format in which output is available: magnetic tape, 9-track, 800 bpi

F.

USAGE INFORMATION

Availability of the system:

Charge basis to users: printed issue, part A DM 700) if subscription order is higher than 10 copies
part B DM 750) the prices are reduced to DM 550 per copy
tape services in the developmental stage free of charge.

Estimate of input of citations: 100 per day

Estimate of output of citations:

G.

U.D.C. or similar "universal" code			
Classification code common to area covered			
Classification code peculiar to system	X		SA
Keywords, descriptors, terms			
Full text			

- * A: X = the item is present in the record
- * B: M = the item is mandatory for output
- * C: O = the item is optional for output
- * C: S = the item is used for search
- A = the item is available for search

Classification basis used: Division into chemical classes based on chemical structure type. Within classes ordering is by molecular formula and there is adequate cross-referencing among classes

D.

MECHANISATION BASIS

Media used for total record: Visible records, 90-column cards, Computer magnetic tapes,
Computer discs

Media used for the search record:

Computer based: IBM 360 system

Configuration: IBM 360/44 - Core: 256K bytes - 4 MT decks (2 7-channel, 2 9-channel) -
3 exchangeable disc drives - 2 graph plotters - 1 card reader/punch -
1 paper tape reader - 1 line printer (with alternative extended character
set print chain)

Minimum configuration required to search the files for retrieval purposes or to replicate the system
performance elsewhere:

128K core, card reader, 2 MT decks, 1 line-printer

As for above but only 2 discs needed and no plotters or paper tape.

Other applications: General-purpose scientific computing

Reprographic methods used to distribute the output of the system: Line-printer paper (multi-part)
Multilith master
Computer typesetting via Photon 713

E.

OUTPUT TO USER

Output options available:

Machine-readable format in which output is available:

F.

USAGE INFORMATION

Availability of the system: Individual requests by application to Dr. D.G. Watson or Mrs. O. Kennard

Charge basis to users:

Estimate of input of citations: Input of citations and numeric data is done on a batch basis -
about 150 papers from journals are processed every 6 weeks

Estimate of output of citations:

G.

RECENT OR PLANNED DEVELOPMENTS

REFERENCES

Name of system: METALS ABSTRACTS AND METALS ABSTRACTS INDEX

Official Abbreviation: Met. A. and Met. A. Index

Address: The Institute of Metals, 17 Belgrave Square, London S.W.1, England and/or American Society for Metals, Metals Park, Ohio, 44073 U.S.A.
 Telephone: London: 01-235-3291 and/or U.S.: 216-338-5151
 Telex:
 Cable Address:

Sponsor or controlling body: The Metals Abstracts Trust composed of The Institute of Metals in England and the American Society for Metals in U.S.A.

Approximate total staff: London: 10 U.S.A.: 7

Approximate annual budget: \$400,000.

Date of first operation: { 1st January, 1968 - METALS ABSTRACTS is the result of a merger between Metallurgical Abstracts published since 1910 and Review of Metal Literature published since 1924

A. AREA AND PURPOSE OF SYSTEM

Area covered: Structure, physics, testing and control, analysis, benefit, application and uses etc. of metals.

Purpose of the System: To provide information retrieval tools in the form of published abstracts and indexes and computer data bases.

Kind of co-operation with other information systems: Joint Publication with the ASM.

B. INFORMATION INPUTS

(i) Sources	Coverage	Language
Books including bibliographies	Extensive	Several languages
Journals including abstract journals	"	"
Technical reports	Selected material	"
General printed matter	"	"

(ii) Digested information from other systems: None

C. RECORD CONTENT

	A*	B*	C*
Authors	X	M	A
Source	X	M	A
Title i.e. original title	X	M	A
Abstract originated at source	X	M	X
Abstract originated by system

Classification code common to area covered	X	M	A
Classification code peculiar to system			
Keywords, descriptors, terms	X	M	A
Full text			

- * A: X = the item is present in the record
- * B: M = the item is mandatory for output
- * C: S = the item is optional for output
- * C: S = the item is used for search
- A = the item is available for search

Classification basis used: 7 main sections and 33 sub-sections

D.

MECHANISATION BASIS

Media used for total record: Visible records, Computer magnetic tape, 80-column cards

Media used for the search record: Visible records, Computer magnetic tape

Computer based: Index file created in 1401 mode on IBM 360/30

Configuration: IBM 360/30; 4 tape drive; 1443 card reader; 1442 printer

Minimum configuration required to search the files for retrieval purposes or to replicate the system performance elsewhere: IBM 360/20; 4 tape drives

Reprographic methods used to distribute the output of the system: Printed journals
Direct computer printout on pages or cards

E.

OUTPUT TO USER

Output options available: Published monthly abstracts and annual collation; more than 25,000 items, 1,700 pages.
Published monthly index and annual cumulation; the latter 1,600 pages.

Machine-readable format in which output is available: Yes, as noted in question D.

F.

USAGE INFORMATION

Availability of the system: Individuals may search published indexes and abstracts or send query to an independent information dissemination centre.

Charge basis to users:

Estimate of input of citations: 25,000 per year averages to about 100 per working day.

Estimate of output of citations: As above

G.

Classification basis used:

Bibliography

Experimental conditions

temperature, column, stationary phase, support, carrier gas, flow rate, detector, instrument

Remarks

Special field

quantitative, application, technique, sample preparation, theory

Chromatogram or Retention data

All substances, organic or inorganic which appear in the chromatogram, graph or table are punched and

the characteristics of their structures and functional groups are coded independently of one another.

General classification of compounds

Isomer, inorganic gases, food flavours, petroleum, biological materials, coal products, air pollutants, fats, fatty acids, reaction products, essential oils, polymers and natural products.

D.

MECHANISATION BASIS

Media used for total record: Punched cards, including edge-punched or coincidence cards

Media used for the search record: Punched cards, including edge-punched or coincidence cards

Computer based

Telephone: 615-483-8611 - Ext.3-1742

Telex:

Cable Address:

Sponsor or controlling body: U.S. Atomic Energy Commission, Division of Isotopes Development

Approximate total staff: 12

Approximate annual budget: \$270,000.

Date of first operation: 1962

AREA AND PURPOSE OF SYSTEM

A. Area covered: Isotope - Production and Applications, Accelerator Irradiations

Purpose of the System: To collect, evaluate and disseminate worldwide information primarily on production and use of radioisotopes in industry and research. The Center also maintains a current awareness of the uses of isotopes in biology, medicine, agriculture, education, forensics and military applications.

Kind of co-operation with other information systems: In such a way as to eliminate duplication of effort.

Approximate annual budget:

\$700,000

Date of first operation:

1954

A.

AREA AND PURPOSE OF SYSTEM

Area covered:

Chemistry and engineering and other technology pertinent to the petroleum and petrochemical industries

Purpose of the System:

1. Early announcement of new technical information
2. Creation of printed indexes and magnetic tape file for information retrieval.

Kind of co-operation with other information systems: Republication of selected abstracts provided by other services.

B.

INFORMATION INPUTS

(i)	Sources	Coverage	Language
	Journals including abstract journals	Extensive	Several languages

(ii) Digested information from other systems:

Source	X	O	
Title i.e. original title	X	O	A
Abstract originated at source			
Abstract originated by system	X		
U.D.C. or similar "universal" code			
Classification code common to area covered			
Classification code peculiar to system	X		
Keywords, descriptors, terms	X	O	S
Full text			

- * A: X = the item is present in the record
- * B: M = the item is mandatory for output
- * C: O = the item is optional for output
- * C: S = the item is used for search
- A = the item is available for search

Classification basis used:

Retrieval is based on a controlled vocabulary of keywords (descriptors) developed especially for the body of information that is covered. These keywords are available in a thesaurus, which also includes scope notes, cross references, and other indications of relationship between keywords and limitations on usage.

D.

MECHANISATION BASIS

Media used for total record: Visible records, computer magnetic tape
Media used for the search record: " " " " "
Computer based
Configuration: IBM 7094, 32K, 12 tape units, card reader.

Minimum configuration required to search the files for retrieval purposes or to replicate the system performance elsewhere: IBM 1401, 12K, 3 tape units, printer, card reader

Reprographic methods used to distribute the output of the system:

1. Photo offset printing of computer-printed pages
2. Copies of computer tapes.

E.

OUTPUT TO USER

Output options available:

Machine-readable format in which output is available:

F.

USAGE INFORMATION

Availability of the system: The system is available only to organisations that have paid the appropriate subscription fees.
Charge basis to users:
Estimate of input of citations: 100 per day
Estimate of output of citations: No information available

G.

RECENT OR PLANNED DEVELOPMENTS

A Selective Dissemination of Information ~~systems~~ using the Chemical Condensates tapes supplied by the Chemical Abstracts Service will be initiated during the year.

REFERENCES

Name of System: CHEMICAL-BIOLOGICAL ACTIVITIES

- * A: X = the item is present in the record
 * B: M = the item is mandatory for output
 O = the item is optional for output
 * C: S = the item is used for search
 A = the item is available for search

Classification basis used:

The Digest Section contains the core information arranged alphabetically by journal title. Digests are numbered consecutively from the first issue of each volume.

ASTM Coden are used to specify journal of origin plus a computer-calculated sixth character to assure Coden reliability in computer-based systems. In the Keyword-In-Context Index these are combined with a group of digits representing the volume and a second group of digits representing the page number of the publication cited.

D.

MECHANISATION BASIS

Media used for total record: Visible records, Computer magnetic tape, Other computer storage, interchangeable, e.g. discs.

Media used for the search record: Visible records, Computer magnetic tape.

Computer based Yes.

Configuration: IBM Model 360/50 (256K) IBM 2250 Cathode Ray Tube Display IBM 2401 II Tape Drives (2)
IBM Model 360/50 (384K) IBM 2280 Film Processor IBM 2401 V Tape Drives (4)

 * C: S = the item is used for search
 A = the item is available for search

Classification basis used: The abstract originated at the source is the free text
(full or running text)

D.

MECHANISATION BASIS

Media used for total record: 80-column cards for profiles input; discs as auxiliary storage;
cores as working area

Media used for the search record: Computer magnetic tape, discs

Computer based: IBM 360/Model 50

Configuration: Core 512 K. Card punch, printer, four 9-track tape drives, one direct
direct access device as temporary stage

Minimum configuration required to search the files for retrieval purposes or to replicate the system
performance elsewhere: IBM 360/model 30

Reprographic methods used to distribute the output of the system:

This is an SDI (selective dissemination of information) system without any
reprographic methods

E.

OUTPUT TO USER

Output options available: Output is on double cards. The left-hand side contains the information;
the right-hand side is for users' responses which contribute feedback to
the system

Machine-readable format in which output is available:

Output is delivered in printed form. It might be supplied in machine-readable format
e.g. punched cards.

F.

USAGE INFORMATION

Availability of the system: Individual requests are made directly with help from search editors.

Charge basis to users: At present the charge is \$100.00 per 40 terms and \$20 for ten additional terms

Estimate of input of citations:

Estimate of output of citations:

Name of system: INDEX CHEMICUS/INDEX CHEMICUS REGISTRY SYSTEM

Official Abbreviation: IC/ICRS

Address: 325 Chestnut Street,
Philadelphia,
Pennsylvania 19106, USA.
Telephone: 215/923 - 3300
Telex: 84-5305
Cable Address: SCINPO

Sponsor or controlling body: Institute for Scientific Information (ISI)

Approximate total staff: 30

Approximate annual budget:

Date of first operation: IC : 1960
ICRS: 1968

A. AREA AND PURPOSE OF SYSTEM

Area covered: Chemical compounds

Purpose of the System: IC : Information on the synthesis, isolation and/or identification of
new chemical compounds
ICRS: Computer searchable store of all chemical compounds in INDEX CHEMICUS
along with bibliographic data
Kind of co-operation with other information systems:

B. INFORMATION INPUTS

(i)	Sources	Coverage	Language
	Journals, including abstract journals	Extensive	Several languages

(ii) Digested information from other systems:

IBM programmes from WLN to connectivity tables, Ring Code and vice versa

C. RECORD CONTENT

	A*	B*	C*
Authors	X	O	S
Source	X	O	S
Title i.e. original title	X	O	S
Abstract originated at source	X	O	S
Abstract originated by system	X	O	A
U.D.C. or similar "universal" code			
Classification code common to area covered			
Classification code peculiar to system	X	O	S
Keywords, descriptors, terms			
Molecular formulae	X	O	S

* A: X = the item is present in the record
* B: M = the item is mandatory for output
O = the item is optional for output
* C: S = the item is used for search
A = the item is available for search

Classification basis used: ISI coding by Programming Services Inc.
ICRS tied to IC Abstract Number (Indexing of parent structures permits
Markuch - Claim Searching). All IC backlog coded (850,000 compounds).

D.

MECHANISATION BASIS

Media used for total record: Computer magnetic tape

Media used for the search record: " " "

Computer based: IBM 360/30

Configuration:

Minimum configuration required to search the files for retrieval purposes or to replicate the system performance elsewhere:

Reprographic methods used to distribute the output of the system:

Index Chemicus: Printed and tape

Index Chemicus Registry System: Computer printout and tape

E.

OUTPUT TO USER

Output options available: Index Chemicus
Index Chemicus Registry System
Specific on-off search and continuing search

Machine-readable format in which output is available:

F.

USAGE INFORMATION

Availability of the system: On request

Charge basis to users: IC : \$8 per issue
ICRS: \$7,500 year (charter members)

Estimate of input of citations:

Estimate of output of citations: IC 250 abstracts per week (2,900 compounds)
ICRS: 150,000 compounds per year

G.

RECENT OR PLANNED DEVELOPMENTS

REFERENCES

For ISI coding, see: "Survey of Chemical Notation Systems", NAS 1150, 1964 (467 pp.)

Name of system: INTERNATIONAL PHARMACEUTICAL ABSTRACTS

Official Abbreviation: IPA

Address: 4630 Montgomery Avenue, Washington D.C. 20014, U.S.A.

Telephone: 657-3000

Telex:

Cable Address:

Sponsor or controlling body: American Society of Hospital Pharmacists

Approximate total staff: 5 Editorial Home Staff and 65 Contributing Editors

Approximate annual budget:

Date of first operation: January 1964

AREA AND PURPOSE OF SYSTEM

- A.
- Area covered: Abstract articles relating to pharmacy and pharmaceuticals for pharmacy, medical and health journals from throughout the world.
- Purpose of the System: To be "key to the world's literature of pharmacy" through abstracting and indexing.
- Kind of co-operation with other information systems: Limited exchange of abstracts.

INFORMATION INPUTS

- B.
- | (i) | Sources | Coverage | Language |
|-----|--------------------------------------|-----------|-------------------|
| | Books including bibliographies | Partial | Several languages |
| | Journals including abstract journals | Extensive | " " |
| | Technical reports | Partial | " " |
| | General printed matter | Partial | " " |

Title i.e. original title	X	M	S
Abstract originated at source	X	O	A
Abstract originated by system	X	M	S
U.D.C. or similar "universal" code			
Classification code common to area covered	X	O	A
Classification code peculiar to system	X	M	S
Keywords, descriptors, terms			
Full text			

- * A: X = the item is present in the record
 * B: M = the item is mandatory for output
 O = the item is optional for output
 * C: S = the item is used for search
 A = the item is available for search

Classification basis used: Chemical substances are indexed under the basic chemical. Wherever possible, indexed headings are non-proprietary names adopted by United States Adopted Names (USAN). When an abstract is indexed as to drug use, therapeutic or pharmacologic activity, the classification system of the American Hospital Formulary Service (AHFS) is used. 25 subject headings or sections are used.

D.

MECHANISATION BASIS

Media used for total record: Visible records, Computer magnetic tape, Microfilm.

Media used for the search record: Visible records, Computer magnetic tape, Other computer storage, interchangeable, e.g. discs, Microfilm.
Computer based

Configuration: 360/40, 128K, 9 tape units, 5 disc units and a 1403 1100 line a minute printer

Minimum configuration required to search the files for retrieval purposes or to replicate the system performance elsewhere: As above

Reprographic methods used to distribute the output of the system: Printing

E.

OUTPUT TO USER

Output options available: Printed text - all volumes since 1964
Microfilm - all volumes since 1964
Magnetic tape - (bank just started in 1970)
Print out - from search

Machine-readable format in which output is available: Magnetic tape

F.

USAGE INFORMATION

Availability of the system: Subscription basis

Subscription rate is \$30.00 per year (24 issues) or \$1.50 for single issues,
Charge basis to users: domestic and foreign - except \$75.00 per year, or \$3.50 for single issues, to industrial libraries and institutions. Costs for computer services to be established in 1970.

Estimate of input of citations: 25 per day

Estimate of output of citations: 25 per day

G.

PLANNED DEVELOPMENTS

Search and retrieval aspect more formalised.

Sponsor or controlling body:

The Highway Research Information Service is part of the Highway Research Board, a unit of the National Academy of Sciences. The Highway Research Board is largely supported by the highway departments of the 50 states and the Bureau of Public Roads of the Federal Highway Administration, Department of Transportation.

Approximate total staff:

20

Approximate annual budget:

\$400,000.00

Date of first operation:

July 1st, 1967

A.

AREA AND PURPOSE OF SYSTEM

Area covered:

Highway and urban transportation systems research information and information on other modes of transportation where they interface with highways and roads. HRIS information levels include technical operations, engineering practice, testing & demonstration, & applied research. To provide useful reference information to researchers, engineers, economists, planners, legal council and administrators in the transportation field, particularly in the highway research field.

Purpose of the System:

Kind of co-operation with other information systems: Informal and voluntary exchange of full size paper sheets containing summary statements about on-going research projects and informative abstracts of journal articles, technical papers, research reports and bibliographies.

B.

INFORMATION INPUTS

Classification basis used:

D.

MECHANISATION BASIS

Media used for total record: Visible records, 80-column cards, computer magnetic tape
Media used for the search record: Visible records, 80-column cards, computer magnetic tape
Computer based
Configuration: IBM system 360 model 30 with 32k core storage, 4 tape drives (IBM 2415 model V dual density, 9 track), 1 disc drive (IBM 2311), 1 IBM 1442 card read-punch, 1 IBM 1403 printer (52 character set, 132 print positions), and 1 IBM 1052 I/O typewriter.
Minimum configuration required to search the files for retrieval purposes or to replicate the system performance elsewhere: Same as above

Reprographic methods used to distribute the output of the system:

1. Computer magnetic tape to computer magnetic tape copy
2. Computer printout carbon copy up to 4 copies
3. Full size photocopy (dry process) of computer printout
4. Photographic reduction, offset plate burned copy printed by offset press and pages bound to form publication.

E.

OUTPUT TO USER

Output options available: File-searches, Current awareness printouts
HRIS Publications: - HRIS abstracts
- Highway Research in Progress (HRIP)

Machine-readable format in which output is available: Output from above items available on 9 track computer magnetic tape at 1600 BPI.

F.

USAGE INFORMATION

Availability of the system: Access to the system can be obtained by communication with IRRD, technical libraries in the U.S.A. or direct communication with HRIS staff
Charge basis to users:
Estimate of input of citations: 40 per day
Estimate of output of citations: 800 per day

G.

RECENT OR PLANNED DEVELOPMENTS

Telex: 84272

Cable Address:

Sponsor or controlling body: Ministry of Transport

Approximate total staff: 20 (in information service)

Approximate annual budget:

Date of first operation: 1967

AREA AND PURPOSE OF SYSTEM

A.

Area covered: Road research (materials, construction, traffic, safety)

Purpose of the System: To provide informative abstracts of published articles, books, patents, specifications, etc. and summaries of on-going research in the field of roads and road transport to research workers and practitioners against specific enquiries and for a broad-based current awareness service.

Kind of co-operation with other information systems: Input obtained from International Road Research Documentation Scheme (OECD) and exchange with U.S. Highway Research Information Service.

INFORMATION INPUTS

B.

(i)	Sources	Coverage	Language

)either/or

- * A: X = the item is present in the record
- * B: M = the item is mandatory for output
- * C: O = the item is optional for output
- * C: S = the item is used for search
- A = the item is available for search

Classification basis used: Accessions (records) are broken down into a number of data elements, but all classification and subsequent retrieval is on a keyword basis, the keywords being chosen from a thesaurus of approx. 2,000 index terms covering the subject field. In addition, one or more subject heading terms may be attached to each record, their use being permanently in the SDI context. Subsequent retrieval is by a logical statement connecting a series of keywords together.

Subject field broken down into approx. 40 subject headings to provide broad-based current awareness service

D.

MECHANISATION BASIS

Media used for total record: 80-column cards, Computer magnetic tape, Other computer storage, interchangeable, e.g. discs, Other computer storage, system-bound, e.g. core
Media used for the search record: 80-column cards, Computer magnetic tape, Other computer storage, interchangeable, e.g. discs, Other computer storage, system-bound, e.g. core
Computer based: Run on ICL 4/70

Configuration: ICL 4/70 - 256KB store, 6 9-track (800 bpi) tape units, 4 (soon to be increased to 6) disc drives, 3 paper tape readers, 2 card readers, 2 line printers, NPL interface, CALCOMP graph plotter.

Minimum configuration required to search the files for retrieval purposes or to replicate the system performance elsewhere: Retrieval package written as 3 programmes requiring:

<u>PROGRAM</u>	<u>STORE(KB)</u>	<u>PERIPHERALS</u>	
I	32	LP = 1	LP = Line printer
II	48	M9 = 2	M9 = 9 track magnetic tape unit
III	60	D = 1, M9 = 1	D = Replaceable disc

Reprographic methods used to distribute the output of the system: Output is on standard 11" computer line-printer paper but lined to A4 format. Output sheets are cut to A4 size and distributed in this form.

E.

OUTPUT TO USER

Output options available: Variety of output options, the 3 main ones are:

- (i) Record number only - 6 bytes per record
- (ii) Record number plus full bibliographic details (average 80 bytes; max. 262 bytes)
- (iii) Record number plus bibliographic details plus abstract (average 1,300 bytes; maximum 4,000 bytes)

Machine-readable format in which output is available: Magnetic tape exchange being currently worked out with Highway Research Information Service. Exchange of information in IRRD via standard communication format tapes being studied.

F.

USAGE INFORMATION

Availability of the system: By personal requests, letter, telephone, telex

Charge basis to users: At present no charge

Estimate of input of citations: 30 per day

Estimate of output of citations: 100 per day

G.

RECENT OR PLANNED DEVELOPMENTS

Current awareness service to be made generally available at cost.
Exchange of information with co-operating bodies in machine-readable form.
Possible extension of subject field.

Cable Address:

Sponsor or controlling body: Nature Conservancy

Approximate total staff: 10

Approximate annual budget: £20,000.

Date of first operation: 1st April, 1964

A. AREA AND PURPOSE OF SYSTEM

Area covered: (1) Data on the distribution of plants and animals in the British Isles: terrestrial, freshwater and the littoral. (2) Ecological site information for Nature Reserves and sites of equivalent status in the British Isles.

Purpose of the System: (1) To provide Atlases showing distribution of plants and animals as a basis for biogeographical research.
(2) To provide a service to research workers who require exact information on the location of material necessary for study.
(3) To discover on a British and European basis which species are now declining and to alert conservation organisations of the threats.

Kind of co-operation with other information systems:

- (1) Technological co-ordination with museum data bank developments in Geology Dept., Cambridge University, England; British Museum (Natural History) and the Smithsonian Institution, Washington D.C.
- (2) Increasing co-operation with colleagues in all countries of Europe to co-ordinate collection of data on plants and animals using common system.

B. INFORMATION INPUTS

(i) Sources	Coverage	Language
Books including bibliographies	Selected material	National language only
Journals including abstract journals	" "	" " "
Technical reports	Partial	" " "
General printed matter	" "	" " "
Manuscripts	Selected material	" " "

(ii) Digested information from other systems: Nil

C. RECORD CONTENT

	A*	B*	C*
Authors			
Source			
Title i.e. original title			
Abstract originated at source			
Abstract originated by system			
U.D.C. or similar "universal" code			
Classification code common to area covered			
Classification code peculiar to system			
Keywords, descriptors, terms			
Full text			

- * A: X = the item is present in the record
 * B: M = the item is mandatory for output
 O = the item is optional for output
 * C: S = the item is used for search
 A = the item is available for search

Classification basis used: A complete record exists of: 1. Species code 2. Date 3. Locality name
 4. Grid references 5. County number 6. Kind of source (Literature, Museum, Field)
 7. Status (Native: Introduced - adult, juvenile) 8. Habitat code 9. Altitude

D.

MECHANISATION BASIS

Media used for total record: Visible records, 80-column cards 40-column cards (in use for 15 years)

Media used for the search record: Visible records, 80-column cards and 40-column cards
Computer magnetic tape by end of 1970

Computer based

Configuration: N.A.

Minimum configuration required to search the files for retrieval purposes or to replicate the system performance elsewhere: One IBM 870 system

Reprographic methods used to distribute the output of the system: Tabulated maps, Tabulations of data
Published atlases, Xeroxed original documents

E.

OUTPUT TO USER

Output options available: 1. Distribution maps of British Isles or part thereof
2. Print out of all or part of data affecting a particular species
3. Print out of all or part of data for a particular area of the British Isles defined by grid squares or county boundaries

Machine-readable format in which output is available: Teleprinter from computer
Electronic typewriter from punched cards or paper tape

F.

USAGE INFORMATION

Availability of the system: By telephone, personal communication or letter

No charge is made to bona-fide scientists

Charge basis to users: Charges are made to commerce for special maps, and royalties are charged for publishing in books or magazines printed for profit.

Estimate of input of citations: 300-400 records

Estimate of output of citations: 1 new or revised map/day
200 records listed/day

G.

RECENT OR PLANNED DEVELOPMENTS

1. Installation of terminal on-line to Atlas Computer of Department of Trade & Industry in Cambridge. 2. Introduction of new, faster and more flexible map making machinery based on an IBM 870 system.

- * C: S = the item is used for search
- A = the item is available for search

(1) The Zoological Record is produced as printed copy - not on tape or cards - therefore any search must be made visually.

Classification basis used: 1. Author Index - papers listed alphabetically under name of author
2. Subject Index - short abstracts contained in relevant headings and sub-headings
3. Systematic Index - entries listed under generic name of animal and grouped into orders, sub-orders, families, etc.

D.

MECHANISATION BASIS

Media used for total record: Visible records

Media used for the search record: Visible records

Computer based

Configuration:

Minimum configuration required to search the files for retrieval purposes or to replicate the system performance elsewhere:

Reprographic methods used to distribute the output of the system: Printed copies from conventional hot-metal typesetting process

E.

OUTPUT TO USER

Output options available: Printed copies
Author index, Subject index, Systematic index

Machine-readable format in which output is available: None for the moment

F.

USAGE INFORMATION

Availability of the system: One volume published annually consisting of 20 sections each dealing with a particular group. Sections may be purchased separately as they are printed.

Charge basis to users: Sold on request, Price varies according to volume..

Estimate of input of citations: }
Estimate of output of citations: } Approx. 35,000 papers and books are indexed each year

G.

RECENT OR PLANNED DEVELOPMENTS

Some scheme of computer mechanisation will be started in 1971 and may be operational by 1973-74.
This may provide additional services.

Classification basis used:

D.

MECHANISATION BASIS

Media used for total record: Visible records

80 - column cards

Media used for the search record: Visible records, 80-column cards

Computer based

Configuration: IBM PCDP System, i.e. Key punch (No.26), Verifier (No.56) Sorter (No.83), Collator (No.77) Reproducer (No.514) Accounting machine (No.40&). Data processings are being carried out at the Management Computing Services, IBM Japan Ltd. IBM system 360/40 is used whose core is of 256 K tape unit of 6, disc unit of 4, card reader/punch (IBM 2540) printer (IBM 1403) calcomp 763/780.

Minimum configuration required to search the files for retrieval purposes or to replicate the system performance elsewhere:

Key punch, Verifier, Sorter, Collator, Reproducer, Accounting machine. IBM System/360 model 20, submodel 5, i.e. CPU (2020 D05), MFCM (2560 A01), Orinter (2203 A01) Magnetic tape unit (2415 004) magnetic disc unit (2311 012), Calcomp (760/536).

Reprographic methods used to distribute the output of the system:

Xerox, Micro-film, Recopy, Quick copy, Reader printer, printed publication.

E.

OUTPUT TO USER

Output options available: CSK Newsletter: 20 pages/bi-month, CSK Atlas : 35 pages/annual
CSK Data Report: 80 pages (4 cruises) bi-month
Miscellaneous: 100 pages/sporadic

Machine-readable format in which output is available:

Oceanographic station data is available in the forms of 80-column card

F.

USAGE INFORMATION

Availability of the system: Through documentation services, Individual request can be made by any means, e.g. oral letter, telephone, telex, etc.

Charge basis to users: Services are free of charge at present

Estimate of input of citations: Acquisition of Oceanographic station data: about 70 stations/day
Acquisition of bibliography : about 6 articles/day

Estimate of output of citations:

CSK Newsletter Bi-month, CSK Atlas Annual, CSK Data Report Bi-month.

Name of system: INTERNATIONAL NUCLEAR INFORMATION SYSTEM

Official Abbreviation: INIS

Address: INIS Section, Division of Scientific & Technical Information, International Atomic Energy Agency, Kärntner Ring 11, P.O. Box 590, A-1011 Vienna, Austria

Telephone: Vienna 52 45 11,52 45 25

Telex: 01-2645

Cable Address: INATOM VIENNA

Sponsor or controlling body: IAEA

Approximate total staff: 20

Approximate annual budget: \$500,000

Date of first operation: 1st April, 1970

AREA AND PURPOSE OF SYSTEM

A.

Area covered: Nuclear Science and Technology

Purpose of the System: To collect, on a decentralised basis, technical information; to centrally check and process this information; to provide a printed index and a magnetic tape service of same; and to provide microfiche copy of abstracts and non-conventional literature submitted by Member States.

Kind of co-operation with other information systems:

Provision of INIS data base to compatible national information systems.

INFORMATION INPUTS

B.

(i) Sources

All textual and non-textual
Information in the area covered
Selection of material is the
responsibility of Member States

Coverage

Limited subject scope
until system com-
pletely debugged

Language

English is the carrier
language for machine-
readable records

(ii) Digested information from other systems:

Machine-readable input and/or abstracts may come from national information systems

RECORD CONTENT

C.

	A*	B*	C*	
Authors	X	M	A	
Source	X	M	A	
Title i.e. original title	X	M	A	
Abstract originated at source	X	M		+
Abstract originated by system				
U.D.C. or similar "universal" code				
Classification code common to area covered				
Classification code peculiar to system	X	M	A	
Keywords, descriptors, terms	X	M	A	
Full text	X	M		++

* A: X = the item is present in the record
* B: M = the item is mandatory for output
* C: S = the item is optional for output
* C: S = the item is used for search
A = the item is available for search

+ Abstracts and full text not available in machine-readable form.
++ Full text of non-conventional literature only.

Classification basis used:

D.

MECHANISATION BASIS

Media used for total record: Magnetic Tape (Abstracts and full texts on microfiche only)

Media used for the search record:

Computer based

Configuration: IBM 360/30, 64K, universal instruction set, 2 selector, 1 multiplexer channel
4 2401/2 9 track, 800 bpi 1 1403/NI printer, universal character set
1 2401/1 7 track, 200/556/800 cpi 1 2501 card reader
3 2311 disc drives 1 2520 card reader/punch

Minimum configuration required to search the files for retrieval purposes or to replicate the system performance elsewhere:

Reprographic methods used to distribute the output of the system:

Abstracts on microfiche (COSATI standard), on annual subscription basis;

Full text of non-conventional literature on microfiche (price structure varies: for standing order of complete sets - 20 cents per fiche, and for single reports complete - 65 cents; both payable in advance)

E.

OUTPUT TO USER

Output options available: Atomindex (printed index to the magnetic tape and catalogue of the literature available on microfiche from the INIS clearinghouse)
INIS Magnetic Tape
Microfiches of abstracts
Microfiches of full texts

Machine-readable format in which output is available:

INIS implementation of ANSI standard for a format for bibliographic information interchange

F.

USAGE INFORMATION

Availability of the system: To Member States of the IAEA

Charge basis to users:

Estimate of input of citations: 100,000 per year (full scope); 25,000 per year (present limited scope)

Estimate of output of citations: as above

G.

RECENT OR PLANNED DEVELOPMENTS

INIS Thesaurus of descriptors. Indexing begun in January 1971

Name of system: EUROPEAN NUCLEAR DOCUMENTATION SYSTEM

Official Abbreviation: ENDS

Address: Luxembourg, 29, rue Aldringer

Telephone: 292.41

Telex: Telex: EUROPLUX 423

Cable Address:

Sponsor or controlling body: Commission of the European Communities

Approximate total staff: 40

Approximate annual budget: \$ 500.000

Date of first operation: experimental: Jan. 1964
Public : Nov. 1966

A. AREA AND PURPOSE OF SYSTEM

Area covered: Peaceful uses of nuclear energy

Purpose of the System: Supply research and industry of member countries with documentary information

Kind of co-operation with other information systems: Exchange of information under contract with member countries, USAEC, UKAEA, and IAEA (Project INIS)

B. INFORMATION INPUTS

(i)	<u>Sources</u>	<u>Coverage</u>	<u>Language</u>
	Books including bibliographies	Extensive	other languages also
	Journals including abstract journals	Extensive	other languages also
	Technical reports	Extensive	other languages also
	General printed matter	Extensive	other languages also

Classification basis used:

Euratom- Thesaurus : 1st edition 1964, 2nd edition 1966-67 Published as report EUR-500e

D.

MECHANISATION BASIS

Media used for total record: visible records, computer magnetic tape

Media used for the search record: computer magnetic tape

Computer based Yes

Configuration: IBM 360; model 2050; 512 K bytes; 12 tape units 2400; 16 disc units 2314; 1 card read punch 2540; 3 printers 1403

Minimum configuration required to search the files for retrieval purposes or to replicate the system performance elsewhere:

IBM 360 model 2050; 65 K bytes; 2 tape units; 1 disc unit; 1 card reader; 1 printer
IBM 360 model 2030; 65 K bytes; 1 tape unit; 2 disc units; 1 card reader; 1 printer

Reprographic methods used to distribute the output of the system:

E.

OUTPUT TO USER

Output options available:

Photocopy or microfilm blowup of abstract file cards
Sizes: 6 x 4 inch and 8 x 6 inch
Specific one-off search: id. (average of 50 cards)
Selective dissemination by user profiles: id. (average of 20 cards/month)

Machine-readable format in which output is available:

F.

USAGE INFORMATION

Availability of the system: System unavailable through documentation services
System available to individuals - by request on formsheet

Charge basis to users: free of charge, feedback required

Estimate of input of citations: 500 per day

Estimate of output of citations: 250 per day by user profiles
300 per day by ad-hoc searches

G.

RECENT OR PLANNED DEVELOPMENTS

Query adjustment by remote job entry through IBM 2770 terminal

Name of system: SYSTEM OF THE U.S. ATOMIC ENERGY COMMISSION

Official Abbreviation: None (there is no official name for the system so far)

Address: P.O. Box 62, Oak Ridge, Tennessee 37830, U.S.A.

Telephone: 615-483-8611

Telex: 615-482-1742

Cable Address:

Sponsor or controlling body: U.S. Atomic Energy Commission

Approximate total staff: 222 permanent positions; 8 part-time professional women; 10 temporary full-time employees; 5 part-time clerical employees

Approximate annual budget: \$3½ million.

Date of first operation: World War II establishment of local facility.

AREA AND PURPOSE OF SYSTEM

A.

Area covered: All phases of nuclear science and technology except routine uses of radioisotopes and radiations and routine radiotherapy and radiodiagnosis.

Purpose of the System: To make available to the nuclear scientist and engineer a comprehensive collection of citations, abstracts, and indexes to the current and past literature on nuclear science.

Kind of co-operation with other information systems: By agreement with the particular organisation, citations and abstracts from 32 services are used in NSA. By agreement with nuclear energy agencies of nine countries abstracts are received of material in scope for NSA published in their respective countries.

INFORMATION INPUTS

B.

(i)	Sources	Coverage	Language
	Books including bibliographies	Extensive	Several languages
	Journals including abstract journals	"	"
	Technical reports	"	"
	General printed matter	Selected material	"
	Manuscripts	Partial	"

(ii) Digested information from other systems: Occasionally if comprehensive report is made available to DTIC.

RECORD CONTENT

⁽¹⁾ Not stored in computer

- * A: X = the item is present in the record
- * B: M = the item is mandatory for output
- * C: S = the item is optional for output
- * C: S = the item is used for search
- A = the item is available for search

NSA is divided into 12 subject categories which are discipline oriented. Each discipline category is divided into sub-categories. In all these are 282 categories and sub-categories. Example: Chemistry and General Physics are categories; Inorganic, Organic, and Physical Chemistry and Cosmic Radiation are sub-categories.

D.

MECHANISATION BASIS

Media used for total record: Visible records, 80-column cards, Other computer storage, interchangeable, e.g. discs, Other computer storage, system-bound, e.g. core, CRT Terminals for input.

Media used for the search record: Visible records, Computer magnetic tape, Other computer storage, interchangeable, e.g. discs, Other computer storage, system-bound, e.g. core.

Computer based: Stored on magnetic tape

Configuration: IBM 360/20 1 paper tape reader
2 MB10 Core memory 1 multi-function card reader
16 K core 1 printer
4 tape drive

Minimum configuration required to search the files for retrieval purposes or to replicate the system performance elsewhere: Above configuration and two or more discs for each year (or volume) of data being searched.

Reprographic methods used to distribute the output of the system: Offset lithography

E.

OUTPUT TO USER

Output options available: Published journals of approximately 53,000 references, citations, abstracts and indexes thereto. Published semi-annual and annual index cumulations. Computer data store of citations (4.0 million words/year) subject indexes to NSA (1.5 million words/year), and keyterm indexes to each citation (600,000 words/year). Only the subject index data store is presently searched on a batch made by computer although capability exists to search the citation record from 1968 to date. Output size depends upon extent of questions. Batch searching of up to 500 Hollerith's input cards.

Machine-readable format in which output is available: Citations and keywords are available.

F.

USAGE INFORMATION

Availability of the system: Retrieval is available only at DTIE upon written request with the understanding that limitations of 7g are understood.

Charge basis to users: Because of time available, delay in processing, and local use of retrieval for training, no charge is presently made.

Estimate of input of citations: Approximately 200 citations per day

Estimate of output of citations: " " " " " Only one to two questions processed per day with possibility of hundreds of abstract number references being delivered. Citations of bibliographic data not furnished. Published journal (NSA) must be consulted by requester.

O = the item is optional for output
- * C: S = the item is used for search
A = the item is available for search

Classification basis used:

One heading for "Nuclear", 32 subheadings
One heading for "General Classificators", 20 subheadings
One heading for "Specific Classificators", 60 subheadings

D.

MECHANISATION BASIS

<u>Media used for total record:</u>	Visible records, computer magnetic tape
<u>Media used for the search record:</u>	80-column cards, computer magnetic tape
<u>Computer based</u>	computer-based system available to supplement Abstract Service
<u>Configuration:</u>	Type 360 IBM/Model 65 DOS System

Minimum configuration required to search the files for retrieval purposes or to replicate the system performance elsewhere:

Reprographic methods used to distribute the output of the system:

E.

OUTPUT TO USER

Output options available:

Machine-readable format in which output is available:

F.

USAGE INFORMATION

Availability of the system:

Charge basis to users:

Yearly subscription rate for monthly abstract publication - \$240.00
Cost of tape and programme for searching system - \$125.00
(Update fee approximately \$125.00)

Estimate of input of citations:

Approximately 225 abstracts per month

Estimate of output of citations:

G.

Compiled by OECD

Name of system: NUCLEAR SAFETY INFORMATION CENTER

Official Abbreviation: NSIC

Address: Oak Ridge National Laboratory, P.O. Box Y,
Oak Ridge, Tennessee 37830

Telephone: 615-483-8611, Ext. 3-7253

Telex:

Cable Address:

Sponsor or controlling body: U.S. Atomic Energy Commission,
Division of Reactor Development and Technology

Approximate total staff: 28

Approximate annual budget: \$450,000.

Date of first operation: 1963

AREA AND PURPOSE OF SYSTEM

A. Area covered: Multidisciplines related to the mission-oriented task of being cognizant of anything related to nuclear safety.

Purpose of the System: Act as a focal point for the collection, evaluation, and dissemination of safety information so as to assist in defining and solving problems relevant to the analysis, design, and operation of nuclear facilities.

Kind of co-operation with other information systems: Exchange of input information and enquiries with other ORNL centers; also other U.S. centers.

INFORMATION INPUTS

B.	Sources	Coverage	Language		
			National language only		
(i)	Books including Bibliographies	Selected material	"	"	"
	Journals including abstract journals	Extensive	"	"	"

REFERENCES

Name of system: RADIATION SHIELDING INFORMATION CENTER

Official Abbreviation: RSIC

Address: P.O. Box X, Oak Ridge Laboratory,
Oak Ridge, Tenn. 37830 U.S.A.

Telephone: 615 483 8611, ext. 3-6944

Telex:

Cable Address: ORNL, Oak Ridge, Tenn.

Sponsor or controlling body: U.S. Atomic Energy Commission

Approximate total staff: 12

Approximate annual budget: \$300,000

Date of first operation: 1962

AREA AND PURPOSE OF SYSTEM

A.

Area covered: Shielding against radiation from nuclear reactors, accelerators,
and radiosotopes and radiation occurring in space.

Purpose of the System: Provide information, computer codes and data to assist nuclear
engineers to solve radiation shielding problems.

Kind of co-operation with other information systems: Exchange computer programs with OECD-ENEA Computer
Programme Library and Argonne Code Center. Participate in
development of Evaluated Nuclear Data File with National Neutron Cross
Section Center.

Classification basis used: Classification is special list of subject categories
which may be described by key words.

D.

MECHANISATION BASIS

Media used for total record:

Media used for the search record:

Computer based

Configuration:

Minimum configuration required to search the files for retrieval purposes or to replicate the system performance elsewhere:

Reprographic methods used to distribute the output of the system:

Visible records, 80-column cards, computer magnetic tape, other computer storage, interchangeable, e.g. discs, system-bound Computer magnetic tape, other computer storage, (e.g. core. interchangeable, e.g. discs, system-bound, e.g. core. IBM 360, COBOL Language

IBM 360 Model 65/50 intercoupled system; core-200 K; 2-IBM 2400 7-channel tape drives; 4-IBM 2400 9-channel tape drives; 3-IBM 2311 disc; 1-IBM 2321 data cell; 1-IBM 2540 card reader; 1-IBM 1403 printer. This does not include core and direct access devices.

164 K of core; 1-IBM 2400 7-channel tape drive; 4-IBM 2400 9-channel tape drive; 1-IBM 2311 disk; 1 card reader; 1 printer. This configuration does not include the core and direct access devices used for system residence.

Selective dissemination of information and special searches are printed on preprinted forms and mailed directly to customers. Bibliographies are printed using IBM-1403 printer and published as ORNL-RSIC reports.

E.

OUTPUT TO USER

Output options available:

Bibliographies and/or abstracts by subject category or logical combination of categories, variable size.

Machine-readable format in which output is available: Computer codes and data are available on magnetic tape to European requesters via ENEA Computer Programme Library.

F.

USAGE INFORMATION

Availability of the system:

Charge basis to users:

Estimate of input of citations:

Estimate of output of citations:

Available to individuals, request by mail or telephone. Most information and services are provided by direct contact with users, some output is published.
No charge at present (1970)

3 per day

Media used for total record: Visible records, 80-column cards, Computer magnetic tape

Media used for the search record: Visible records, Computer magnetic tape

Computer based: An IBM 360/50 Computer is used to sort and tabulate all data for the Mass Spectrometry Bulletin. Cobol language is used. An IBM 7030 Computer is used for preparation of Mass Spectral Data Sheets.

Configuration: Computers IBM 360/50 and 7030 - Card Reader IBM 2540 - Printer IBM No. 1403 - Tape Units IBM Model 2400-2 - Disc Units IBM Model 2314 - Card Punch IBM Model No. 029 - Card Sorter IBM Model No. 083

Minimum configuration required to search the files for retrieval purposes or to replicate the system performance elsewhere: The Computer is not at present used for file searching. Programmes for this purpose are under development.

Reprographic methods used to distribute the output of the system: For complete output distribution via the Mass Spectrometry Bulletin the IBM 1403 output is pasted on to 24" x 15" sheets for insertion into an Addressograph Photo Direct Model 705 plate-making machine which produces in one operation a reduced size plastic plate suitable for reproduction on Multilith Model 1250 offset litho printers.

E.

OUTPUT TO USER

Output options available: Mass Spectrometry Bulletin (11½" x 8½") published monthly since November 1966 with cumulated Annual Indexes. Also available on magnetic tape.

Data sheets are published in sets of 250 spectra. Also available on magnetic tape in sets of 1,000 spectra or as complete collection.

Machine-readable format in which output is available: Bulletin and Data sheets available on Magnetic Tape.

F.

USAGE INFORMATION

Availability of the system: Mass Spectrometry Bulletin is available from Her Majesty's Stationery Office, P.O. Box 569 London or from British Information Services, 843 3rd Avenue, New York, NY 10022, U.S.A. Spectral Data sheets are available from The Mass Spectrometry Data Centre, AWRE, Aldermaston, Berks.

Charge basis to users: Bulletin: £25. per annum plus postage including annual index
£300. per annum on magnetic tape.

Data Sheets: £25. plus postage for each lot of 1,000 Spectra. Tapes: £60. for 1,000 MSDC Spectra on magnetic tape. £160 for collection of 6,000 Spectra from existing

Estimate of input of citations: collections on magnetic tape.

25 per day

Estimate of output of citations:

G.

RECENT OR PLANNED DEVELOPMENTS

Introduction of Computer controlled optional typesetting for printing the Mass Spectrometry Bulletin. Improved classification of chemical compounds to facilitate Computer searches.

1970

A.

AREA AND PURPOSE OF SYSTEMArea covered:

All areas of physics and astronomy as reported in primary
journal literature

Purpose of the System:

Magnetic tape service based on primary journal literature. Printed
current awareness service. Preparation of material for computer-
assisted photo-composition for portions of AIP journals. Later
services include individual retrospectives searches on demand; remote
access to central information store.

Kind of co-operation with other information systems:

Extensive collaboration with other major information systems to
insure and improve compatibility of computer tape format & coverage.

B.

- * A: X = the item is present in the record
 * B: M = the item is mandatory for output
 O = the item is optional for output
 * C: S = the item is used for search
 A = the item is available for search

Classification basis used:

Hierarchical list of terms, which can be more than one word treated as an
entity or "bound term", developed by system staff; these terms are also
used as display or subject headings in printouts such as current awareness
journals (Current Physics Titles), bibliography series, etc.

Uncontrolled, free language, keywords taken from abstract are appended to
terms from classification list to increase specificity.

D.

MECHANISATION BASIS

Media used for total record: Computer magnetic tape, discs, cores

Media used for the search record: Computer magnetic tape, discs, cores. Remote terminals (by system staff only)

Computer based:

Configuration: IBM 360 system on compatible configurations

Minimum configuration required to search the files for retrieval purposes or to replicate the system performance elsewhere: Several systems for different size computers available

Reprographic methods used to distribute the output of the system: Computer-aided photocomposition, using RCA Videocomp 830, of current awareness journal.
Current Physics Titles: Copies of current input as computer-readable magnetic tape now available to pilot user group. Available as production service, 1971 - microcopy of input to be made available in later stage of the system.

E.

OUTPUT TO USER

Output options available: Current Physics Titles - new current awareness journal. Available on subscription, 1971. Early production to be in a combined edition reporting total monthly current input. Later, journal to be offered in subdisciplinary subject sections, such as Solid State, Nuclear Physics, Particles and Fields, etc.

SPIN - Searchable Physics Information Notices - A magnetic tape copy of current input cumulative indexes for journals published by AIP produced.

Machine-readable format in which output is available: Abstracts part of unit record, available as part of search printout and in bibliographic series to be issued in 1971.

F.

USAGE INFORMATION

Availability of the system: Outputs such as SPIN tapes, CPT journal, etc. available from system. Tapes are supplied to information centres and others serving regional areas or the public in general.

Charge basis to users: To be announced

Estimate of input of citations: 100-200 per day

Estimate of output of citations: 2,000-2,500 per month

G.

RECENT OR PLANNED DEVELOPMENTS

- Current Physics Titles
- SPIN
- Computer-aided photocomposition of indexes to journals published by AIP

- A = the item is available for search

Underlined keywords from text in document are found in a Thesaurus with code numbers for each keyword. Numbers with unit and descriptor for what it counts may also be stored. Less than and Logic AND, OR and NOT may be used in questions.

D.

MECHANISATION BASIS

Media used for total record: Computer magnetic tape
Media used for the search record: Computer magnetic tape
Computer based:
Configuration: CDC 1604, 32,000 words of 48 bits, 8 tape units

Minimum configuration required to search the files for retrieval purposes or to replicate the system performance elsewhere: 7 tape units

Reprographic methods used to distribute the output of the system: Xerox copies from manual found cards
the access numbers of which are ordered by the computer

E.

OUTPUT TO USER

Output options available: In a single run any number of new documents may be stored and any number of questions asked. A question may have up to 256 descriptors including numbers

Machine-readable format in which output is available: Yes if wanted as magnetic tape or paper tape but print-out is used

F.

USAGE INFORMATION

Availability of the system: Requests may be sent to Regnecentralen A/S, Falkoneralle 1,
DK 2000 Copenhagen, Denmark

Charge basis to users: Free to members of the Eldoc Association. The service bureau Regnecentralen charge 1.00 Danish krone per document stored + 0.50 D. kr. per question asked = 0.35 per answer written out + D.kr. 50. -per run + a minor sum if the file is larger than 5,000 documents (at present 10,000 documents are stored)

Estimate of input of citations: 2,000 per year

Estimate of output of citations: 1 per week

G.

RECENT OR PLANNED DEVELOPMENTS

Special order of descriptors may be demanded so that distinction may be made between "Dog bites Postman" and "Postman bites Dog"

- * A: X = the item is present in the record
- * B: M = the item is mandatory for output
- * C: O = the item is optional for output
- * C: S = the item is used for search
- * A = the item is available for search

Classification basis used:

COSATI Subject Category List (see REFERENCES below); TEST thesaurus (see REFERENCES below)

D.

MECHANISATION BASIS

Media used for total record: Two magnetic tape files: (1) a search file, and (2) a photocomposition file. These are scheduled to be combined into a single, searchable file.

Media used for the search record: Computer-produced reference aids, used manually (5x8 card file and a subject index print-out); magnetic tapes (occasional use).

Computer based Yes

Configuration: IBM 360-40 with tape drives, printer. Also has discs and ATS remote terminals, but these are not presently used by National Referral Center.

Minimum configuration required to search the files for retrieval purposes or to replicate the system performance elsewhere:

Replication not presently under consideration

Reprographic methods used to distribute the output of the system:

Linotron photocomposer (at U.S. Government Printing Office) for formal publications. Occasionally use Xerox 914 copier.

E.

OUTPUT TO USER

Output options available: Names, addresses, and phone numbers of organizations or individuals able to provide answers to submitted questions; information about any restrictions or limits on service imposed by organization; data about size and nature of holdings, special facilities, etc.

Transmitted to requester by telephone, letter, computer print-out, and--in a general sense--through photocomposed directories

Machine-readable format in which output is available: None directly available to users. Photocomposition file format is a special adaptation of the MARC II format.

F.

USAGE INFORMATION

Availability of the system: Any serious investigator

Charge basis to users: None

Estimate of input of citations: Data on some 8,000 organizations maintained on a current basis.

Estimate of output of citations: Published directories (about two per year) carry some 2 - 3,000 entries each. Replies to individual inquiries (about 2500 per year) typically carry 1 - 10 entries.

G.

RECENT OR PLANNED DEVELOPMENTS

Publication of a revised directory covering the physical sciences and engineering (will be the first photocomposed publication). Possibly a computer text-search capability, and magnetic-tape-to-microfilm output.

Name of system: INFORMATION RETRIEVAL SERVICE AT FOA

Official Abbreviation: FOA Index

Address: S - 104 50 Stockholm 80, Sweden

Telephone: 08/63 15 00

Telex:

Cable Address:

Sponsor or controlling body: Research Institute of Swedish National Defence (Abbreviated FOA)

Approximate total staff: Total staff of FOA Index: 6 persons (including research activities)

Approximate annual budget: 300,000 Swedish Crowns.

Date of first operation: As to engineering index CITE Electrical and Electronics tapes, complete tapes for 1967-1969: service from these tapes begun on a small scale in Oct. 1967.

AREA AND PURPOSE OF SYSTEM

A.

Area covered: This is not in the first place a service centre but a research group, collaborating with the Swedish Defence and other selected Swedish institutions for handling files from various fields on an experimental basis.

Purpose of the System: The purpose of the experimental service is on the first hand to provide the Swedish National Defence and connected institutions with references to scientific and technical information from international and internal files and to evaluate and improve methods, programs and organisation for such a service.

Kind of co-operation with other information systems: Engineering Index CITE Electronic and Electrical files are handled, but also different files from various scientific and technical fields.

INFORMATION INPUTS

Keywords, descriptors, terms	X	O	S

Full text The program can handle full text, but full text is seldom included in the records

- * A: X = the item is present in the record
 - * B: M = the item is mandatory for output
 - * C: S = the item is used for search
 - A = the item is available for search
- # Categories or subject headings: These data constitute an example, namely the converted version of Engineering Index CITE Tapes. The program system CORSAIR can handle several other combinations and it is used for searches and various indexes.

Classification basis used:

For engineering index tapes: The Engineering Index thesaurus with current frequencies.

For reports: NASA and TEST thesauri

For the International Road Research Documentation: Their "Arrow-diagram" system terms and categories.

For various purposes: Internal keyword - and category lists.

D.

MECHANISATION BASIS

Media used for total record: Computer magnetic tape

Media used for the search record: 80 column cards, computer magnetic tape

Computer based

Configuration: IBM 7090 (until about December 1970) 10 tape units (three available for programming)
IBM 360/75 4 tape units. 8 disc units in one common unit 2314. One drum.

Minimum configuration required to search the files for retrieval purposes or to replicate the system performance elsewhere: Most of the above mentioned, because of the size of the program and the large files handled.

Reprographic methods used to distribute the output of the system:

At present, partly carbon copies, partly offset masters from the computer, partly original and photo copies.

E.

OUTPUT TO USER

Output options available: At present: Computer printout (with facilities for carbon copies and offset masters).
Retrospective search.

Machine-readable format in which output is available:

F.

USAGE INFORMATION

Availability of the system: Available mainly for Swedish Defence but special agreements can be made for experimental collaboration

Charge basis to users: According to individual agreement.

Estimate of input of citations:

Estimate of output of citations:

G.

RECENT OR PLANNED DEVELOPMENTS

Depending on the experiences from present service

Minimum configuration required to search the files for retrieval purposes or to replicate the system performance elsewhere: as above

Reprographic methods used to distribute the output of the system: Computer printer

E.

OUTPUT TO USER

Output options available: Source Index Stages: Alphabetically arranged author index with titles and all bibliographic data on all items and all issues of 1,700 journals. All titles translated.
Printed: quarterly; cumulated yearly.
Tape: weekly, 5,500 items per week.
Citation Index and Stages: Directory of cited references arranged by First Author, listing source documents. Any reference cited in articles in 1,700 journals listed (20,000 cited journals).
ASCA IV: Tape Demand Search Service, ISI Search Service
Machine-readable format in which output is available: Magnetic tape, 7-9 tracks, 556/800 bpi

F.

USAGE INFORMATION

Availability of the system: Printed source and citation indexes: \$1,250 year
Tape: \$20,000-32,000 year
Charge basis to users: ASCA III: Cost depends on number and type of profile entered (minimum: \$100 year)
Permuterm subject index: \$700/year (7 volumes)
Estimate of input of citations: 5,500 weekly
Estimate of output of citations: 65,000 weekly

G.

RECENT OR PLANNED DEVELOPMENTS

REFERENCES

Name of system: SOKRATUS

Official Abbreviation: SOKRATUS (designation contains the first letters of the most important functions of the system and it is decipherable in Czech as well as in English)

Address: State Library of ČSR, Praha 1, Klementinum 190, Czechoslovakia

Telephone: 23 45 45 - 49

Telex: sk ccsr 0116

Cable Address:

Sponsor or controlling body: Ministry of Culture of CSR

Approximate total staff: planned for the first stage of full-scale operation (which may start in 1975) - ca. 16-18

Approximate annual budget: for the developmental stages ca. 500.000 Kcs/year (average value)

Date of first operation: scheduled for 1973

- A. AREA AND PURPOSE OF SYSTEM
- Area covered: The SOKRATUS system is envisaged to operate for the whole network of scientific and special libraries, for which it should in the first stage of operation procure the whole purchased hard currency literature. In its second stage the system should keep central records and perform central cataloging of literature obtained from extra-market sources (especially the exchange).
- Purpose of the System: The principal idea of the project is to establish a central data base performing acquisition and central cataloging, yielding information on the location of the documents acquired (union catalogue of scientific literature), rendering reference service and providing for library statistics and record keeping.
- Kind of co-operation with other information systems: The system will be open for active as well as passive co-operation of any level. The co-operation with the MARC II - format systems is preferred

- B. INFORMATION INPUTS
- | (i) | Sources | Coverage | Language |
|-----|--------------------------------------|-------------------|-------------------|
| | Books including bibliographies | Extensive | Several languages |
| | Journals including abstract journals | " | " |
| | Technical reports | " | " |
| | General printed matter | Selected material | " |
| | Manuscripts | " | " |
- (ii) Digested information from other systems: Published national bibliographies and other acquisition aids. In further development stages MARC II - format (BNB London, LC Washington and other future sources)

D.

MECHANISATION BASIS

Media used for total record: Computer magnetic tape - Other computer storage, interchangeable, e.g. discs
Media used for the search record: Other computer storage, interchangeable, e.g. discs

Computer based:

Configuration:

Reprographic methods used to distribute the output of the system: Printing machine working in either on-line or off-line regime (according to task performed); punched or magnetic tape controlled typewriters for special purposes integrated offset printer using paper masters.

If possible, the described output chain should be replaced by the microphotoprinter KOM-90 (Kodak), or by similar device, with a continual Xerox (or electrostatic) printer

If economically acceptable, the libraries should be equipped with communication terminals, connected to the system via telex or telephone lines; in such cases, the libraries should duplicate the SOKRATUS output partly on their own equipment.

E.

OUTPUT TO USER

<u>Output options available:</u>	Conventional catalogue cards *Bound catalogues Catalogue records on paper tape Catalogue records on magnetic tape Additions to branch-specialised union catalogues	Additions to central union catalogue (on magnetic tape) *Bibliographies of any arrangement desired (in conventional or machine-readable form) Selective dissemination of information (selective news service) Statistical information of various kinds and levels *Outputs are proposed for further stages of development
<u>Machine-readable format in which output is available:</u>	MARC format	

F.

USAGE INFORMATION

Availability of the system:

Charge basis to users: According to complexity and volume of services provided

- * B: M = the item is mandatory for output
O = the item is optional for output
- * C: S = the item is used for search
A = the item is available for search

Classification basis used:

All STEI centres are using UDC and most of them prepare documentary entries with annotations. Centres utilising computers use descriptors of keywords, scientific uniters and subject words. In order to unify the describing procedures methodical instructions and standards are used.

D.

MECHANISATION BASIS

Media used for total record: Visible records, Other punched cards, including edge punched or coincidence cards, Computer magnetic tape

Media used for the search record: visible records, other punched cards, including edge-punched or coincidence cards, computer magnetic tape

Computer based Minsk 2 ICT 1900 IBM 1410, 360, 40 DATASAB 21, 22 ICL 4

Configuration: is changing

Minimum configuration required to search the files for retrieval purposes or to replicate the system performance elsewhere:

Reprographic methods used to distribute the output of the system:

All computers are used for STEI systems only partially. Direct computer output is used for SDI services or for routine activities of information centre (1 up to 3 copies are sufficient). The phototransfer and offset printing is also used for indexing services. In isolated cases ormig papers and ormig duplicating methods are used as output means.

E.

OUTPUT TO USER

Output options available:

Machine-readable format in which output is available:

F.

USAGE INFORMATION

Availability of the system: Both through documentation services and through libraries.

Charge basis to users:

Estimate of input of citations: approx 1000 citations per day

Estimate of output of citations: approx. 25 000 of information are disseminated per day

G.

RECENT OR PLANNED DEVELOPMENTS

The development of Czechoslovak STEI System is formulated in the State Information Policy Programme for the years 1971-75 which is intended to provide basic prerequisites for creation of uniform Czechoslovak Information System, reasonably automated and inter-linkable both with other interstate information circles and on international scale as well, in order to become gradually qualified to participate in exchange of information in machine-readable form.

- * C: S = the item is used for search
A = the item is available for search

Classification basis used: U.D.C. is used for the classification of books on an exhaustive basis. "Keywords" are assigned to the articles, papers, reports, etc., more specifically, the system is carried out with a view so as to allow easy mechanisation, when necessary.

D.

MECHANISATION BASIS

Media used for total record:

Visible records

Media used for the search record:

Visible records

Computer based

Configuration:

Minimum configuration required to search the files for retrieval purposes or to replicate the system performance elsewhere:

Reprographic methods used to distribute the output of the system: Photo-copying - Micro-filming
Micro-fiche making - Enlargement

E.

OUTPUT TO USER

Output options available: 1. Bibliographical lists with or without abstracts.
2. SDI card service giving titles and bibliographical references only.
(This is done on an experimental basis)
3. Publishing abstract bulletins, in all branches covered by the system,
giving informative abstracts, in English, of the Turkish scientific
and technical research papers. (Nine series each having 150 abstracts p.y.)

Machine-readable format in which output is available:

F.

USAGE INFORMATION

Availability of the system:

Charge basis to users:

Paper photocopies:	1-6 pages: 10 TL (\$1.-).	Additional pages: 125 kr/page (\$0.15/page)
Microfilms:	1-10 frames: 10 TL (\$1.-)	Additional frames: 50 kr/page (\$0.05)
Literature search:	Searches covering a five-year period in Turkish and English 200 TL (\$20.-)	
	For every additional language within the same period	100 TL (\$10.-)
	For every additional five-year period	50 TL (\$5.-)

G.

Among the planned developments was the preparation of a translators' index and the publication of an internal news bulletin can be mentioned. The other future developments and services of the system will be planned according to the needs and requests of industry and the individual scientists.

AREA AND PURPOSE OF SYSTEM

A.

Area covered: All scientific, technical and economic disciplines of interest for national defence, among the 22 COSATI fields (U.S.A.).

Purpose of the System: To keep informed on scientific, technical and economic developments to the members of the French Ministerial Delegation for Armament, Headquarters, Administration and industries agreed by the Minister of State for National Defence. (Scientists, engineers, managers, professors, students, etc.)

Kind of co-operation with other information systems:
Exchange of documents or information; inclusion of entries in the Abstracts Bulletins

INFORMATION INPUTS

B.

(i)	Sources	Coverage	Language
	Books, including bibliographies	Selective	Several languages
	Journals, including abstracts journals	Selective	" "
	Technical reports	Partial	" "
	Commercial notes	Partial	" "

(ii) Digested information from other systems:

Abstract originated by system	X	M	A
U.D.C. or similar "universal" code			
Classification code common to area covered	X	M	S
Classification code peculiar to system	X	M	S
Keywords, descriptors, terms			
Full text			

- * A: X = the item is present in the record
- * B: M = the item is mandatory for output
O = the item is optional for output
- * C: S = the item is used for search
A = the item is available for search

Classification basis used: COSATI (Lex version) for the system as a whole and for computer usage

D.

MECHANISATION BASIS

Media used for total record: Visible records, discs, cores

Media used for the search record: Discs, cores

Computer based: IBM 360-30. Capacity: 64 K

Configuration: 4 disc units 2311; 1 core 2321-M1; 1 punched band reader (Friden 8 channels) 2671;
Card reader TTS 3964 (6 channels); 1403N1 printint unit (200 characters/sec.) -
4 control units 1051, 2841, 2822, 2821

Minimum configuration required to search the files for retrieval purposes or to replicate the system performance elsewhere: 4 disc units; core; card reader

Reprographic methods used to distribute the output of the system:

Computer printer
BS printer (TTS computer bands)

E.

OUTPUT TO USER

Output options available: "Bulletins signaletiques" (Abstracts bulletins); bibliographical searches;
selected diffusion of information; indexing; specialised vocabularies; lending of documents;
translations; abridged descriptions of patents interesting for Armament purposes

Machine-readable format in which output is available: No

F.

USAGE INFORMATION

Availability of the system: As shown under "A"

Charge basis to users: Documents on loan are free of charge - "Bulletin signaletique"; subscription
rate varies between 50 and 350 F/year - Bibliographies; prices vary between
50 F and 1600 F (annual rate)

Estimate of input of citations: 150,000 documents/year

Estimate of output of citations:

G.

Classification code common to area covered			
Classification code peculiar to system			
Keywords, descriptors, terms			
Full text	X	O	O

- * A: X = the item is present in the record
- * B: M = the item is mandatory for output
- * O = the item is optional for output
- * C: S = the item is used for search
- A = the item is available for search

Classification basis used: Use of structured scientific concepts in multiple-entry indexing and co-ordinate retrieval (SIE System) (a) Unique last-term system (b) Invested Search System (see ref. under G)

D.

MECHANISATION BASIS

Media used for total record: Visible records, 80-column cards, Computer magnetic tape,
Other computer storage, interchangeable, e.g. discs, system-bound, e.g. core
Media used for the search record: Visible records, Computer magnetic tape, Other computer storage, inter-
changeable, e.g. discs, system-bound, e.g. core
Computer based: IBM 360/40
Configuration: S/360 (model 40) - 131,072 bytes of main core storage - 4 9-track tape drives -
5 IBM 2311 units - 1 IBM 2540 card reader (model 1) - 1 IBM 1403 printer (model N 1)
Minimum configuration required to search the files for retrieval purposes or to replicate the system
performance elsewhere: Same. Exclusion of communication terminals
Reprographic methods used to distribute the output of the system: Computer Printer - Xerox Copies -
Microfilm Printer - Multilith

E.

OUTPUT TO USER

Output options available: Magnetic tape - variable
Notice of Research Project document - 8½x11"
Computer print-out page - variable
Table of data - 8½x11"
Catalogue - variable

Machine-readable format in which output is available: The Interchange Tape is consistent with the standard
codes 3-4-1967 and 3-12-1967 adopted by USASII. Alternatively it may be suitable for input to an
IBM System 360 computer (9 track, 800 BPI) if the latter is more convenient.

F.

USAGE INFORMATION

Availability of the system:

Charge basis to users:

Estimate of input of citations: 300 per day

Estimate of output of citations: 1,500 per day

G.

RECENT OR PLANNED DEVELOPMENTS

None

Classification basis used:

D.

MECHANISATION BASIS

Media used for total record: Visible records (cards), 80-column cards (NOT for CAS, SDI)

Media used for the search record: Visible records

Computer based: Manual - cerebral

Configuration: Covered approx. 400,000 items per year.
Approx. $\frac{1}{2}$ million full references in retro file.

Minimum configuration required to search the files for retrieval purposes or to replicate the system performance elsewhere: None, but output would be massive if too broad.

Reprographic methods used to distribute the output of the system: Plant of various kinds

E.

OUTPUT TO USER

Output options available: "Services": Minimum cost £15. - £20. p.a. (weekly)
£8. " (monthly)
covering up to 6 cards per week.
Some services cost up to £250 per year covering several hundred references per week (e.g. NMR & IR spectroscopy)

Machine-readable format in which output is available:

F.

USAGE INFORMATION

Availability of the system:

Charge basis to users: Basically £6. per gross of cards. Minimum £15. or more usually £20. per annum.
Unit costs drop substantially as size of service increases.

Estimate of input of citations:

Estimate of output of citations:

Approximate annual budget: \$75,000

Date of first operation: 1965

A. AREA AND PURPOSE OF SYSTEM

Area covered: This Library contains a reference collection of over 19,000 engineering and related standards, specifications, test methods and recommended practices.

Purpose of the System: To disseminate information concerning: (1) engineering standards published by over 360 trade, professional and technical societies in the U.S.; (2) Federal specifications and Standards published by the General Services Administration; (3) voluntary Product Standards published by the National Bureau of standards; (4) the availability of Military Specifications and Standards; and (5) state standards and procurement specifications

Kind of co-operation with other information systems: Assist in the overall co-ordination of standardization information; to other libraries and information centres, act as an information source and referral centre

B. INFORMATION INPUTS

(1)	Sources	Coverage	Language
-----	---------	----------	----------

(ii) Digested information from other systems:

see "Purpose of the System" for information from other sources. In addition catalogues of standards published by foreign national standardization organisations have been received. Copies of standards issued by all Federal Government agencies and by some foreign countries (for subsequent indexing) are being collected.

C. RECORD CONTENT

D.

MECHANISATION BASIS

Media used for total record: Titles (with identification numbers and symbols) on magnetic tape

Media used for the search record: Key words

Computer based: Yes - tapes, cards, and computer printouts

Configuration: Computer alphabetised permutation of key words

Minimum configuration required to search the files for retrieval purposes or to replicate the system performance elsewhere:

Reprographic methods used to distribute the output of the system: None from this section

E.

OUTPUT TO USER

Output options available: Title of the document is the output to the user

Machine-readable format in which output is available:

Key-Word-In-Context (KWIC) Index will be published by end of year

F.

USAGE INFORMATION

Availability of the system: Available to the public as well as to government and private organisations, by letter, phone or personal visit

Charge basis to users: None

Estimate of input of citations: Over 19,000 to date

Estimate of output of citations: 6,000 annually

G.

RECENT OR PLANNED DEVELOPMENTS

Collected Federal government standards and State standards and purchase specifications

REFERENCES

Name of system: INFORMATION SERVICE IN PHYSICS, ELECTRO-TECHNOLOGY AND CONTROL

Official Abbreviation: INSPEC

Address: Institution of Electrical Engineers, Savoy Place, London W.C.2

Telephone: 01-240-1871

Telex: 261176

Cable Address: Voltampere London W.C.2.

Sponsor or controlling body: Institution of Electrical Engineers

Approximate total staff: 95

Approximate annual budget: £483,290

Date of first operation: 1898

A. AREA AND PURPOSE OF SYSTEM

Area covered: Physics, Electrotechnology, Computers and Control

Purpose of the System: To provide comprehensive dissemination and retrieval services in the field defined above

Kind of co-operation with other information systems: Joint Publishers with the IEEE in the electrotechnology, computers and control field

B. INFORMATION INPUTS

(1)	<u>Sources</u>	<u>Coverage</u>	<u>Language</u>
	Journals, reports, patents, books, conference proceedings, dissertations	As comprehensive as possible 2000 journals	20, all translated
(ii)	<u>Digested information from other systems:</u>		
	USGRDR Dissertation Abstracts Patents from Derwent Publishing	Selectively	

C. RECORD CONTENT

	A*	B*	C*
Authors	X	0	S
Source	X	0	S
Title i.e. original title	X	0	S
Abstract originated at source	X	0	A
Abstract originated by system	X	0	A
U.D.C. or similar "universal" code	-	-	-
Classification code common to area covered	-	-	-
Classification code peculiar to system	X	0	S
Keywords, descriptors, terms	X	0	S
Full text	-	-	-

* A: X = the item is present in the record
 * B: M = the item is mandatory for output
 0 = the item is optional for output
 * C: S = the item is used for search
 A = the item is available for search

Classification basis used: 3- level hierarchical structure

D.

MECHANISATION BASIS

Media used for total record: Magnetic Tape

Media used for the search record: Magnetic Tape/Disc

Computer based Yes

Configuration: ICL 1902A

Minimum configuration required to search the files for retrieval purposes or to replicate the system performance elsewhere:

ICL 1902A

Reprographic methods used to distribute the output of the system:

computer-typeset, photo-composed, offset-litho printed

E.

OUTPUT TO USER

Output options available: Printed abstract journals - Physics Abstracts, Electrical and Electronics Abstracts, Computer and Control Abstracts
Printed current awareness journals for above
Six-monthly and cumulative indexes for above
SDI service
Standard profile service
Magnetic tape services

Machine-readable format in which output is available:

Magnetic tape-format to international ISO/TE46 standard (a subset of MARC II format)

F.

USAGE INFORMATION

Availability of the system: Open to all subscribers

Charge basis to users: Subscription basis to various services, details available on request

Estimate of input of citations: 140,000 per annum

Estimate of output of citations: 140,000 per annum

G.

RECENT OR PLANNED DEVELOPMENTS

Full search facilities, integrated SDI system within main production system,
on-line editing

Name of system: SYSTEM OF THE OFFICE OF ENGINEERING REFERENCE

Official Abbreviation: None (no official name exists for the system)

Address: Office of Engineering Reference,
U.S. Bureau of Reclamation, Denver Federal Center,
Denver, Colorado 80225, U.S.A.
Telephone: 303 233 3611, Ext. 6592
Telex: Telex 45737
Cable Address:

Sponsor or controlling body: Office of Engineering Reference

Approximate total staff: 25
Approximate annual budget: \$430,000 (includes technical library activity)
Date of first operation: 1963

- A. AREA AND PURPOSE OF SYSTEM
- Area covered: Water resources engineering, including irrigation, and hydropower generation and transmission.
- Purpose of the System: Computer-oriented Selective Dissemination of Information (SDI) and retrieval systems for technical needs of 2,300 professional employees.
- Kind of co-operation with other information systems: No direct interface with other systems.

- B. INFORMATION INPUTS
- | (i) Sources | Coverage | Language |
|--------------------------------------|-------------------|------------------|
| Books including bibliographies | Partial | Several language |
| Journals including abstract journals | Extensive | " " |
| Technical reports | " | " " |
| General printed matter | " | " " |
| Manuscripts | Selected material | " " |
- (ii) Digested information from other systems: Water Resources Scientific Information Center, Department of the Interior, Washington, D.C. 20240

- * A: X = the item is present in the record
* B: M = the item is mandatory for output
O = the item is optional for output
* C: S = the item is used for search
A = the item is available for search

Classification by Committee on Scientific and Technical Information (COSATI) for subject categories

Classification basis used:

D.

MECHANISATION BASIS

Media used for total record: Visible records, computer magnetic tape
Media used for the search record: 80-column cards, computer magnetic tape
Computer based Honeywell 800/200
Configuration:

Minimum configuration required to search the files for retrieval purposes or to replicate the system performance elsewhere:

Honeywell 800/200

Reprographic methods used to distribute the output of the system: Xerox 914 duplicator and Honeywell 200 printer

E.

OUTPUT TO USER

Output options available: Computer printout (10 x 11 inches) and SDI cards (3 x 7-3/8 inches)

Machine-readable format in which output is available:

F.

USAGE INFORMATION

Availability of the system: Available only within Bureau of Reclamation
Charge basis to users: No charge to inhouse users; not available extramurally.
Estimate of input of citations: System is building; no measure yet available.
Estimate of output of citations:

G.

RECENT OR PLANNED DEVELOPMENTS

Search capability upon request by individuals.

REFERENCES

Name of system: SELECTIVE DISSEMINATION OF ENGINEERING INFORMATION

Official Abbreviation: SDI (IBM System 1401-CR-01X, modified)

Address: USDI, Bonneville Power Administration, Attn: Library - MAL
P.O. Box 3621, 1002 NE. Holladay, Portland, Oregon

Telephone: 503-234-3361, ext. 4445

Telex:

Cable Address:

Sponsor or controlling body: BPA Technical Library

Approximate total staff: 1 electrical engineer and 1 translator

Approximate annual budget: \$50,000.

Date of first operation: June 1966

AREA AND PURPOSE OF SYSTEM

A.

Area covered: The coverage is confined to high voltage electric power transmission engineering.

Purpose of the System: 1. To announce selectively new published papers, reports, etc. to engineers and scientists, to make them aware of what is being done in their field elsewhere.
2. To store data in easily retrievable form for retrospective searches to compile bibliographies upon requests.

Kind of co-operation with other information systems: None

INFORMATION INPUTS

B.

(i)	Sources	Coverage	Language
	Books including bibliographies	Selected material	National language only
	Journals including abstract journals	Extensive	Other languages also
	Technical reports	Selected material	" " "
	General printed matter	Partial	" " "
	Manuscripts	Selected material	" " "

(ii) Digested information from other systems: None

RECORD CONTENT

C.

	A*	B*	C*
Authors	X	O	S
Source	X	M	
Title i.e. original title	X	O	S
Abstract originated at source			S
Abstract originated by system			
U.D.C. or similar "universal" code			
Classification code common to area covered			
Classification code peculiar to system			
Keywords, descriptors, terms		O	A
Full text			

- * A: X = the item is present in the record
- * B: M = the item is mandatory for output
O = the item is optional for output
- * C: S = the item is used for search
A = the item is available for search

Classification basis used: No classification - SDI number is assigned to each item entered into the system. The number contains the abbreviation for source of abstract (if not original) and date of publication of the document.

D.

MECHANISATION BASIS

Media used for total record: Computer magnetic tape
Media used for the search record: Computer magnetic tape
Computer based IBM 1401
Configuration: IBM 1401 with 8,000 positions of core storage, advanced programming, high-low-equal compare and a minimum of 4 magnetic tape units. However, operation is much smoother with 5 tape units. Also uses card reader and printer. Uses internal tape labels. Programmes are written in 1401 Autocoder.
Minimum configuration required to search the files for retrieval purposes or to replicate the system performance elsewhere: As above

Reprographic methods used to distribute the output of the system: The output of the computer system consists of abstracts and other material printed on a card which is the same size as a standard 80-column IBM punched card. This printing is done entirely by the computer's output printer, with no assistance for any other reproduction equipment. After reading the abstract, the customer can request a hard-copy of the actual material (either original or copy).

E.

OUTPUT TO USER

Output options available: Single keywording and multiple (phrase) keywording. Exclusion (drop) list or inclusion list. Selective exclusion of different parts of the abstract from keywording, and printing (independently controlled). Predetermined thesaurus headings and manual indexing or machine matching of words in text. Earlier, unimproved versions allowed addressing for distribution through postal service; ours only provides a short abbreviated address for internal mail.

Machine-readable format in which output is available: Intermediate output is available on machine-readable magnetic tape. Final output on printed cards cannot be read by machine, except for one option which includes a sequential output number in punched form on one end of the card which can subsequently be machine read. But only this number can be read, together with a "Porta-punch" response from the recipient as to his reaction.

F.

USAGE INFORMATION

Availability of the system: Through BPA Library only.
Charge basis to users: Free to BPA engineers. Limited subscriptions available at \$30.00 per profile per year.
Estimate of input of citations: 25 per working day
Estimate of output of citations: Depends on standing order inquiry (profile). The broad subject profile may result in up to 30 per week citations.

G.

RECENT OR PLANNED DEVELOPMENTS

KWIC/KWOK printout on titles in storage.

- * C: S = the item is used for search
A = the item is available for search

Classification basis used:

A scheme for classification of information on nutrition coded for machine retrieval. I. Leitch and W.Z. Billewicz. Commonwealth Agricultural Bureaux, 1963; with Addendum, 1967.

D.

MECHANISATION BASIS

Media used for total record: 80 column-cards
Media used for the search record:
Computer based Mechanical card-sorter
Configuration: The mechanised system provides access to the printed abstracts

Minimum configuration required to search the files for retrieval purposes or to replicate the system performance elsewhere:

Reprographic methods used to distribute the output of the system: Xerography of printed abstracts

E.

OUTPUT TO USER

Output options available: Abstracts, specific on-off search on a limited scale

Machine-readable format in which output is available:

F.

USAGE INFORMATION

Availability of the system: Available to individuals by correspondence with the Director of the Bureau
Charge basis to users: Based on staff and machine time
Estimate of input of citations:
Estimate of output of citations:

Classification basis used: The Oxford System of Decimal Classification for Forestry, Oxford Commonwealth
Forestry Bureau, 1954, 115 p. The Oxford System (ODC) forms part of the UDC under UDC 634.0 Forestry.

D.

MECHANISATION BASIS

Media used for total record: Computer magnetic tape

Media used for the search record: "

Computer based

Configuration: At the DRZ, Darmstadt: IBM 7094 with two IBM 1401 as satellite units, Telefunken TR 440 for input conversion only

Minimum configuration required to search the files for retrieval purposes or to replicate the system performance elsewhere: No retrieval; compilation of bibliography only.

Reprographic methods used to distribute the output of the system: Computer print out will be reduced in size by photographic means and duplicated by offset machine.

E.

OUTPUT TO USER

Output options available: Objective of the system is the compilation of the bibliographic part and the indexes of the bibliography only. The indexes are a tool of search for the users.

Machine-readable format in which output is available:

F.

USAGE INFORMATION

Availability of the system: the bibliography, i.e. the output only, is available by subscription to all bodies and individuals interested.

Charge basis to users: Charge per volume (4 numbers) of the "Bibliographie des forst- und hzwirtschaftlichen Schrifttums" DM 32,-

Estimate of input of citations: ca. 50 per day

Estimate of output of citations:

G.

XII-4	NL
SOCIAL SCIENCE	

Name of System: Centrum voor sociaal-wetenschappelijke Documentatie en literatuurinformatie i.o.

Official Abbreviation:

Address: Keizersgracht 569-571, Amsterdam - C.

Telephone: 020 - 234698

Telex:

Cable Address:

Sponsor or controlling body:

Approximate total staff: 7 (1970)

Approximate annual budget: + Dfl. 300.000.

Date of first operation: 1971

A. AREA AND PURPOSE OF SYSTEM

Area covered: Social sciences (sociology, social anthropology, psychology, pedagogics, political sciences, administration sciences, management).

Purpose of the System: For lack of an up-to-date international system covering a satisfactory amount of information on social science literature from Europe in general and from the Netherlands especially, many organisations in the Netherlands have set up documentation services. Purpose of the Centre for social science documentation is the creation of one Information Centre based on the material of the existing documentation.

Kind of co-operation with other information systems: Services.

The information of the Centre will be based on abstracts made in the existing documentation services. For very specific literature the Centre will refer to the specialised documentation services.

B. INFORMATION INPUTS

(i)	Sources	Coverage	Language
	Books including bibliographies	Selected material	Several languages
	Journals including abstract journals	Extensive	"
	Technical reports	Extensive	"
	Current research projects	Extensive	National language only

(ii) **Digested information from other systems:** with the exception of its own documentation of current research projects, of doctoral theses and of the reports on concluded research projects, the Centre will for further information depend on other documentation services in the Netherlands.

MECHANISATION BASIS

Media used for total record: Magnetic tape (9 channel, 800 b.p.i.)

Media used for the search record: Magnetic tape (9 channel, 800 b.p.i.)

Computer based

Configuration: IBM 3665/OSMFP

Minimum configuration required to search the files for retrieval purposes or to replicate the system performance elsewhere:

To search: IBM 3620/32K core or Spectra 70 32 K core
To replicate: IBM 3665/0s 512 K core

Reprographic methods used to distribute the output of the system:

Line printers, Photon, Linofilm, Linotron, Microfiche, hardcopy

E.

OUTPUT TO USER

Output options available: Printed Indexes (Research in Education, Current Index to Journals in Education)
computer terminal with CRT
Lineprinter

Machine-readable format in which output is available: In accession number sequence in the form of one or more IBM System /360 Operating System variable length records. Each ERIC Report Resumé equals one record on magnetic tape. These records are grouped in variable lengths of 32,000 bytes. Standard 05/360 tape labelling conventions are used.

F.

USAGE INFORMATION

Availability of the system: ERIC System in Public Domain

A standing order (purchase of all titles in a given document collection) costs 11¢ per Charge basis to users: fiche, while individual titles cost 25¢ per fiche. Hard copy (at about 70% of full size) costs 5¢ per page. Detailed ordering information is provided in each issue of RIE or in each index to special collections developed by ERIC.

Estimate of input of citations: 40,000 per year.

Estimate of output of citations: 40,000 per year.

G.

RECENT OR PLANNED DEVELOPMENTS

On-line computer searching; development of state information networks.

- * A: X = the item is present in the record
- * B: M = the item is mandatory for output
O = the item is optional for output
- * C: S = the item is used for search
A = the item is available for search

Classification basis used: Since 1966 an alphabetical list of descriptors was used. Since July 1968 an attempt has been made to develop a German thesaurus of education. For this purpose the "Information Retrieval Thesaurus of Education Terms" by Bahrydt, Schmidt and Chang, Case Western Reserve University, Cleveland, Ohio was used as a model. The German thesaurus of education will be a macro-thesaurus allowing micro-thesauri to be co-ordinated with this macro-thesaurus.

D.

MECHANISATION BASIS

Media used for total record: Visible records, punched tapes, 80-column cards

Media used for the search record: Visible records, punched tapes, 80-column cards

Computer based

Configuration: Programmes are being developed for Telefunken TR 4

Minimum configuration required to search the files for retrieval purposes or to replicate the system performance elsewhere:

Reprographic methods used to distribute the output of the system: Citations on punched tapes are sorted by hand to produce a long punched tape that is used to produce pages (DIN A 3). These pages are reduced to DIN A 4 for photomechanical printing. This procedure will be changed when a computer programme for processing of citations is used.

E.

OUTPUT TO USER

Output options available: Machine output (printed bibliography) will presumably be available by summer 1971 with over 12,000 citations annually

Machine-readable format in which output is available: Format according to Regeln für Maschinengerechte Titelaufnahme

F.

USAGE INFORMATION

Availability of the system: The bibliography is available through documentation services and through libraries.

Charge basis to users:

Estimate of input of citations: over 1,000 citations per month

Estimate of output of citations:

G.

RECENT OR PLANNED DEVELOPMENTS

Preparations of computer programme and thesaurus are such that - beginning with the analysis for literature 1971 (e.g. April or May 1971) - the punched tapes can be processed by a computer for the production of the bibliography. Further developments in 1971 ff. include attempts of retrieval and some time later possible for SDI. It will also be necessary to develop concordances of different thesauri and to make use of algorithms (such as developed by the Language Information Network and Clearinghouse System) for the attempt to link the educational macro thesaurus with micro thesauri of specialised fields.

- * A: X = the item is present in the record
- * B: M = the item is mandatory for output
0 = the item is optional for output
- * C: S = the item is used for search
A = the item is available for search

Classification basis used:

- 0 Basic management Theories
- 1 General Management
- 2 Material Management
- 3 Personnel Management
- 4 Marketing Management
- 5 Financial Management
- 6 Accounting
- 7 Production Management
- 8 Information and Administration
- 9 Environment of Business

D.

MECHANISATION BASIS

Media used for total record: Computer magnetic tape, File cards

Media used for the search record: File cards

Computer based

Configuration: 1) Input IBM 7765 (paper tape input, 8-channel); 2) IBM 1460, 16 K, IBM 729 (VI) tape unit conversion GIER 3000 (7-track to 9-track magnetic tape; 3) IBM 360/30; 4) Conversion GIER 3000 (9-track magnetic tape to TTS-paper tape, 6-channel)

Minimum configuration required to search the files for retrieval purposes or to replicate the system performance elsewhere: IBM 1460, 16 K
GIER Converte 3000

Reprographic methods used to distribute the output of the system:

- 1) Titel Bibliographie ZID, printed with aids of 6-channel TTS-tape by Lynotype-printer
- 2) Documentation file-cards, printed by Xerox off set-technique

E.

OUTPUT TO USER

Output options available: About 1200 titles in bibliographies appears 8 times a year.

Neue Betriebswirtschaft
Zeitschrifteninformationsdienst (Zid)
Heidelberg, Verlagsgesellschaft Neue Betriebswirtschaft

Machine-readable format in which output is available: Computer magnetic tape.

F.

USAGE INFORMATION

Availability of the system: only for members of the ring

Charge basis to users: Free for members of the Documentation-Ring

Estimate of input of citations: 25 per day

Estimate of output of citations: 60 per day

G.

RECENT OR PLANNED DEVELOPMENTS

REFERENCES

Name of system: NEW BOOKS ABROAD

Official Abbreviation: GIPSY

Address: State Library CSR, Klementinum 190,
Praha 1, Staré mesto, Czechoslovakia.

Classification basis used:

D.

MECHANISATION BASIS

Media used for total record: Computer magnetic tape (proposed second stage)

Media used for the search record: Computer magnetic tape (proposed first stage)

Computer based

Configuration:

Minimum configuration required to search the files for retrieval purposes or to replicate the system performance elsewhere: It is proposed to use the larger computer CDC 3300 of the Freie Universität Berlin

Reprographic methods used to distribute the output of the system:

Offset method - Platemaster and Rotaprint Sy 40

E.

OUTPUT TO USER

Output options available:

Machine-readable format in which output is available:

F.

USAGE INFORMATION

Availability of the system: It can be ordered through Verlag Dokumentation, 8023 München-Pullach, Postfach 148

Charge basis to users: yearly subscription rate 180.00 DM

Estimate of input of citations: 7/8 per day

Estimate of output of citations: 150 abstracts per month

G.

RECENT OR PLANNED DEVELOPMENTS

The CDC 3300 computer of the Freie Universität Berlin will be used.

Name of system: STÁTNÍ KNIHOVNA ČESKÉ SOCIALISTICKÉ REPUBLIKY
STATE LIBRARY OF THE CZECH SOCIALIST REPUBLIC

Official Abbreviation: SK ČSR

Address: Praha 1, Klementinum 190, Czechoslovakia

Telephone: 234545 - 9

Telex: sk čssr 0116

Cable Address:

Sponsor or controlling body: Ministry of Culture of the CSR

Approximate total staff: 470

Approximate annual budget: 30 mil. Kčs

Date of first operation: 1958 (year of the foundation of the State Library of the CSR by the unification of the former research libraries: University Library, National Library, Slavonic Library, Central Economic Library)

A. AREA AND PURPOSE OF SYSTEM

Area covered: Social sciences, natural sciences

Purpose of the System: The main tasks of the State Library of the CSR are given (a part of the task of a central library) by its function as a national library (collecting and conservating all Czech literature, publishing the national bibliography) and a central research library (collecting and processing the most important foreign literature)

Kind of co-operation with other information systems: As the central library within the unified Czech library systems the State Library of the CSR is the centre for co-ordinating bibliographies, scientific research work and methodological aid, international exchange and acquisition, union catalogue of foreign literature, international and inter-library loan service, conservation and restauration of book stocks, etc.

B. INFORMATION INPUTS

(i)	<u>Sources</u>	<u>Coverage</u>	<u>Language</u>
	Books including bibliographies	Extensive Selected material	National and other languages
